Our team

Thalappil Pradeep

Institute Professor

Deepak Parekh Institute Chair Professor and
Professor of Chemistry

Department of Chemistry

Indian Institute of Technology Madras

Chennai 600036, India

Phone: +91-44-22574208

Fax: +91-44-22570545/0509

Email: pradeep@iitm.ac.in

Laboratories: DST Unit of Nanoscience
and Thematic Unit of Excellence

Web: <https://pradeepresearch.org/>

Our struggle is to be creative
every day.

Ph.D. students

- A. Suganya*
 - Amoghavarsha R. Kini
 - Anagha Jose
 - Anubhav Mahapatra
 - Atrayee Datta
 - Bijesh K. Malla
 - B. S. Sooraj
 - Deepak Kumar Patel*
 - Harshita Nagar
 - Keerthana Unni
 - Khusboo Saluja
 - Riya Dutta
 - Samapti Mondal
 - Sinchan Mukhopadhyay
 - Soham Chowdhury
 - Sonali Seth
 - Subrata Bag
 - Subrata Duary
 - Sujan Manna
 - Swetashree Acharya
 - Tanmayaa Nayak
 - Vivek Yadav
- * Jointly advised students

MS students

- S. Sudhir

Postdoctoral fellows/ Project associates

- Dr. Anirban Som
- Dr. A. Parthasarathy
- Dr. Anish R Nath
- Dr. Lopamudra Acharya
- Dr. Rival Jose
- Dr. Sourav Kanti Jana
- Karthika Kalyansundar
- S. Jayaram

Annual Report 2024

International visiting fellows

- Dr. Egor Moses
- Dr. Nebil Omri

Administrative officer

- K. Priya

M.Sc./Visiting students

International joint students/Postdocs

- Suzan Kagan*
- Sapir Assayag
- Alexandra Skliarevskaja
- Itay Eldar
- Dr. Maya Khatun

Lab attendants

- Chitra Ganavel
- Merlin Martin
- Sasikala Sudhakar

* Jointly advised PhD student from Tel Aviv University

Centre of Excellence (CoE) on Molecular Materials and Functions

CoE fellows

- Dr. Depanjan Sarkar
- Dr. Mathew Joseph
- Dr. Ramya Dwivedi
- Dr. Rahul Kumar

What's Inside

1. Glimpses of 2024
2. Awards and honours
3. Publications
4. Patents granted/applied
5. Degree holders
6. Lectures delivered
7. Students' activities
8. Students' recognitions
9. Alumni news
10. Research grants
11. Visits/Visitors
12. Services
13. Incubation
14. Centres
15. Activities of the Centre of Excellence on Molecular Materials and Functions
16. Media reports
17. Publication analysis
18. Abstracts at a glance
19. Acknowledgements

Glimpses of 2024

The Book, “Technological Solutions for Water Sustainability: Challenges and Prospects: Towards a Water-Secure India” edited by Ligy Philip, Thalappil Pradeep, and S. Murty Bhallamudi, was released by Shri M.K. Narayanan, 19th Governor of West Bengal and former NSA, on March 22, 2024.

Inauguration of ANRF National facility of Cryo-EM at IIT Madras, by Prof. Abhay Karandikar, Secretary, DST, along with Prof. V. Kamakoti, Director, IIT Madras, and Prof. T. Pradeep, on August 28, 2024.

Participants of the 11th edition of AsiaNano Conference on Nanoscience and Nanotechnology, IIT Madras held during September 23–25, 2024.

Participants of the 1st International Symposium on Cryo-Electron Microscopy, IIT Madras, on August 10, 2024.

Participants of the 2nd edition of the Centre of Excellence International Winter School on Molecular Materials and Functions 2024, IIT Madras held during December 4–8, 2024.

Participants of the 2nd edition of Centre of Excellence International Conference on Molecular Materials and Functions 2024, IIT Madras held during December 9–11, 2024.

Annual Report 2024

Participants of the 2nd edition of the International Conference on Water for Life 2024, IIT Madras held during December 12–14, 2024.

IIT Madras organized a hands-on workshop on Microcrystal Electron Diffraction (MicroED) after the 1st International Symposium on Cryo-Electron Microscopy 2024, held during August 11–13, 2024.

Prof. T. Pradeep becomes the 23rd foreign member from India to be elected to the United States National Academy of Engineering (NAE), on September 25, 2024. This is one of the highest professional distinctions. The picture was taken at the dinner of the class of 2024.

International Advisory Board (IAB) of the Centre of Excellence on “Molecular Materials and Functions”, IIT Madras, held on December 8, 2024. Our co-investigators and several world leaders in the area participated.

India-Germany discussion meeting on International Research Training Groups, fostering new opportunities for bilateral scientific advancements, IIT Madras, December 11, 2024, supported by our DST-DFG project.

Awards and Honours

Prof. T. Pradeep was honoured with the prestigious 'CRS Gold Medal' by the Chirantan Rasayan Sanstha for his academic achievements at the symposium on "Science Beyond Boundaries: Invention, Discovery, Innovation, and Society - Rasayan 18", Christ University, Bangalore, January 29, 2024.

Prof. T. Pradeep receiving the prestigious Eminent Engineer Award 2023 in the Research & Consultancy category of the Engineering Council of India (ECI), New Delhi, April 29, 2024.

Prof. T. Pradeep receiving the 'Prof. M.V. Pylee Award 2023' for the distinguished academician in India, May 30, 2024. It was instituted by the Cochin University of Science and Technology (CUSAT), presented by honourable ministers of Kerala State Dr. R. Bindu and P. Rajeeve and Anil Sahasrabudhe, Chairman, National Educational Technology Forum (NETF), in presence of the VC of CUSAT.

Prof. T. Pradeep has been elected as a fellow of Academia Europaea in 2024.

Prof. T. Pradeep being inducted as a fellow of the US National Academy of Engineering by its President John L. Anderson and Chair Errol B. Davis, NAS Building, Washington DC, September 26, 2024.

Prof. T. Pradeep was honoured with "Acharya Prafulla Chandra Ray Memorial Award 2023" by the Indian Chemical Society at the JECRC University, Jaipur, Rajasthan, December 21, 2024 (to be received in person in 2025).

Publications

1. Stable dimer intermediates during intercluster reactions of atomically precise nanoclusters, Swetashree Acharya, Jayoti Roy, Diptendu Roy, Biswarup Pathak and Thalappil Pradeep, *J. Phys. Chem. C.* (2024) (Just accepted)
2. Simulated interstellar photolysis of N₂O ice: selectivity in photoproducts, Bijesh Malla, Soham Chowdhury, Devansh Paliwal, Hanoona K. M., Gaurav Vishwakarma, Rabin Methikkalam and Thalappil Pradeep, *J. Phys. Chem. C.* (2024) (DOI: [10.1021/acs.jpcc.4c06624](https://doi.org/10.1021/acs.jpcc.4c06624))
3. Growth of clathrate hydrates in nanoscale ice films observed using electron diffraction and infrared spectroscopy, Bijesh Malla, Ding-Shyue Yang and Thalappil Pradeep, *J. Phys. Chem. Lett.* (2024) (DOI: [10.1021/acs.jpcllett.4c03106](https://doi.org/10.1021/acs.jpcllett.4c03106))
4. Milling-induced 'Turn-off' luminescence in copper nanoclusters, Subrata Duary, Arijit Jana, Amitabha Das, Swetashree Acharya, Amoghavarsha Ramachandra Kini, Jayoti Roy, Ajay Poonia, Deepak Patel, Vivek Yadav, Sudhadevi P. K. Antarjanam, Biswarup Pathak, Kumaran Nair Valsala Devi Adarsh and Thalappil Pradeep, *Inorganic Chemistry* 63 (2024) 18727–18737. (DOI: [10.1021/acs.inorgchem.4c02617](https://doi.org/10.1021/acs.inorgchem.4c02617))
5. Nanocluster reaction-driven *in-situ* transformation of colloidal nanoparticles to mesostructures, Paulami Bose, Pillalamarri Srikrishnarka, Matias Paatelainen, Nonappa, Amoghavarsha Ramachandra Kini, Anirban Som, and Thalappil Pradeep, *Nanoscale* (2024). (DOI: [10.1039/D4NR02820A](https://doi.org/10.1039/D4NR02820A))
6. Enhanced electrical output in an electrostatic generator using charged water, Vishal Kumar, Pillalamarri Srikrishnarka, Ramamurthy Nagarajan, and Thalappil Pradeep, *ACS Sustain. Chem. Eng.* 12 (2024) 13106–13115. (DOI: [10.1021/acssuschemeng.4c01860](https://doi.org/10.1021/acssuschemeng.4c01860))
7. Multicolor photoluminescence of Cu₁₄ clusters modulated using surface ligands, Arijit Jana, Subrata Duary, Amitabha Das, Amoghavarsha Ramachandra Kini, Swetashree Acharya, Jan Machacek, Biswarup Pathak, Tomas Base and Thalappil Pradeep, *Chem. Sci.* 15 (2024) 13741–13752. (DOI: [10.1039/D4SC01566E](https://doi.org/10.1039/D4SC01566E))
8. From solution to microstructures in minutes: microdroplet-derived stand-alone TiO₂ surfaces for simultaneous water harvesting and treatment, Keerthana Unni, Jenifer Shantha Kumar, Anirban Som,

Depanjan Sarkar, Thalappil Pradeep, ACS Sustainable Chem. Eng. 12 (2024) 11957–11967. (DOI: [10.1021/acssuschemeng.4c02806](https://doi.org/10.1021/acssuschemeng.4c02806))

9. Cysteine-protected antibacterial spheroids of atomically precise copper clusters for direct and affordable arsenic detection from drinking water, Jenifer Shantha Kumar, Arijit Jana, Jayathraa Raman, Hema Madhuri Veera, Amoghavarsha Ramachandra Kini, Jayoti Roy, Sourav Kanti Jana, Tiju Thomas and Thalappil Pradeep, ES&T Letters 11 (2024) 831–837. (DOI: [10.1021/acs.estlett.4c00264](https://doi.org/10.1021/acs.estlett.4c00264))
10. Extensive polymerization of atomically precise alloy metal clusters during solid state reactions, B. S. Sooraj, Jayoti Roy, Manish Mukherjee, Anagha Jose and Thalappil Pradeep, Langmuir 40 (2024) 15244–15251. (DOI: [10.1021/acs.langmuir.4c01737](https://doi.org/10.1021/acs.langmuir.4c01737))
11. Partitioning photochemically formed CO₂ into clathrate hydrate under interstellar conditions, Gaurav Vishwakarma, Bijesh Malla, Rajnish Kumar and Thalappil Pradeep, PCCP 26 (2024) 1600–16016. (DOI: [10.1039/D4CP01414F](https://doi.org/10.1039/D4CP01414F))
12. Interparticle anti-galvanic reactions of atomically precise silver nanoclusters with plasmonic gold nanoparticles: interfacial control of atomic exchange, Paulami Bose, Jayoti Roy, Vikash Khokhar, Biswajit Mondal, Ganapati Natarajan, Sujan Manna, Vivek Yadav, Anupriya Nyayban, Sharma S. R. K. C. Yamijala, Nonappa and Thalappil Pradeep, Chem. Mater. 36 (2024) 7581–7594. (DOI: [10.1021/acs.chemmater.4c00620](https://doi.org/10.1021/acs.chemmater.4c00620))
13. Observing atomically precise nanocluster aggregates in solution by mass photometry, Jayoti Roy, Ila Marathe, Vicki Wysocki and Thalappil Pradeep, Chem. Commun. 60 (2024) 6655–6658. (DOI: [10.1039/D4CC00363B](https://doi.org/10.1039/D4CC00363B))
14. Interfacial growth of large area single-crystalline silver sheets through ambient microdroplets, Depanjan Sarkar, Anirban Som, Keerthana Unni, Sujan Manna, and Pradeep Thalappil, Small, (2024) 2400159. (DOI: [10.1002/sml.202400159](https://doi.org/10.1002/sml.202400159))
15. Spontaneous weathering of natural minerals in charged water microdroplets forms nanomaterials, B. K. Spoorthi, Koyendrila Debnath, Pallab Basuri, Ankit Nagar, Umesh V. Waghmare and Thalappil Pradeep, Science, 384 (2024) 1012–1017. (DOI: [10.1126/science.adl3364](https://doi.org/10.1126/science.adl3364))

16. Spontaneous α -C-H carboxylation of ketones by gaseous CO₂ at the air-water interface of aqueous microdroplets, Pallab Basuri, Sinchan Mukhopadhyay, K. S. S. V. Prasad Reddy, Keerthana Unni, B. K. Spoorthi, Jenifer Shantha Kumar, Sharma S. R. K. C. Yamijala and

Thalappil Pradeep, *Angew. Chem.* 63 (2024) e202403229.
(DOI: [10.1002/anie.202403229](https://doi.org/10.1002/anie.202403229))

17. Formation and dissociation of dimethyl ether clathrate hydrate in interstellar ice mimics, Bijesh Malla, Gaurav Vishwakarma, Soham Chowdhury, Samir Nayak, Sharma S. R. K. C. Yamijala and Thalappil Pradeep, *J. Phys. Chem. C*, 128 (2024) 2463–2470. (DOI: [10.1021/acs.jpcc.3c07792](https://doi.org/10.1021/acs.jpcc.3c07792))

Editorials (2024)

1. Reintroducing the INTRODUCTION: how to write a compelling introduction for the ACS sustainable family of journals, Audrey Moores, Jingwen Chen, Bala Subramaniam, Michael KC Tam, Elizabeth J. Biddinger, Dean Brady, Danielle Julie Carrier, Ivet Ferrer, Nicholas Gathergood, Hongxian Han, Ive Hermans, King Kuok Mimi Hii, Bing Joe Hwang, Milad Kamkar, Kevin Leonard, Watson Loh, Say Chye Joachim Loo, Andrew C. Marr, Michael A.R. Meier, Ryuhei Nakamura, Graham N. Newton, Thalappil Pradeep, Kotaro Satoh, Wil V. Sruhar III, Ning Yan, Asha James, Mihir Jha, Atal Shivhare, Julio F. Serrano, and Peter Licence, *ACS Sustainable Chem. Eng.* 12 (2024) 8581–8583. (DOI: [10.1021/acssuschemeng.4c04252](https://doi.org/10.1021/acssuschemeng.4c04252))
2. Managing water, the mother of resources: thoughts on world water day 2024, Thalappil Pradeep, Michael K. C. Tam and Julio F. Serrano, *ACS Sustainable Resour. Manage.* 1 (2024) 368–369. (DOI: [10.1021/acssusresmgt.4c00096](https://doi.org/10.1021/acssusresmgt.4c00096))
3. Fireside chat with Man Mohan Sharma: Catalysis for sustainability, Milad Kamkar, Thalappil Pradeep and Julio F. Serrano, *ACS Sustainable Resour. Manage.* (2024) (DOI: [10.1021/acssusresmgt.4c00502](https://doi.org/10.1021/acssusresmgt.4c00502))

Patents Granted

Indian patents

1. Synthesis of protein protected luminescent metal clusters and retaining the bioactivity of the protein, Pradeep, Debasmita Ghosh, Mohammad Bodiuzzaman, Anirban Som, Ananya Baksi, Atanu Ghosh, and Jyotirmoy Ghosh, application no. 201841049925, dated December 31, 2018, issued as patent no. 495343, issued on January 5, 2024.
2. A method of detection of low concentration of analytes by superhydrophobic pre – concentration paper spray ionization mass spectrometry (SHPPSI MS), T. Pradeep, Pallab Basuri, Avijit Baidya and Tripti Ahuja, application no. 201741047403, dated December 30, 2017, issued as patent no. 504588, issued on January 31, 2024.
3. A smartphone based fluoride-specific sensor for rapid and affordable colorimetric detection and precise quantification at sub-ppm levels for field applications, Thalappil Pradeep, Sritama Mukerjee, Manav Shaw and Kamalesh Choudhuri, application no.

202041026054, dated June 20, 2020, issued as patent no. 536268, issued on April 30, 2024.

4. A method to transform crystalline minerals to nanoparticles by microdroplets, T. Pradeep, B. K. Spoorthi and Pallab Basuri, application no. 202241038282, dated July 7, 2022, issued as patent no. 539562, issued on May 28, 2024.

Patents Applied

1. Method of preparing assembled spheroids of copper nanoclusters for ultra-trace arsenic detection, Thalappil Pradeep, Tiju Thomas, Jenifer Shantha Kumar and Arijit Jana, application no. 202441041750, dated May 29, 2024.
2. Method of making nanoparticles from natural minerals in high-pressure water jets, T. Pradeep and B. K. Spoorthi, application no. 202441041814, dated May 29, 2024.
3. Electrospray deposited anisotropic alloy catalysis for efficient nitrate reduction in wastewater, Thalappil Pradeep, Aswathi K. S., Depanjan Sarkar, Keerthana Unni, Sourav Kanti Jana, Anirban Som, Soham Chowdhury, Sinchan Mukhopadhyay, application no. 202441104803, dated December 31, 2024.
4. A method of efficient transformation of crystalline minerals to nanoparticles by salt-containing microdroplets, Thalappil Pradeep, Jamshiya Sulthana P, Anubhav Mahapatra, B. K. Spoorthi, Depanjan Sarkar, application no. 202441104922, dated December 31, 2024.

PCT Applied

1. Material and method for sustainable and affordable atmospheric water harvesting, Thalappil Pradeep; Ankit Nagar; Sonali Seth, application no. WO2024047666 A1, dated March 7, 2024.
2. Vertically aligned nanoplates of atomically precise Co_6S_8 cluster for practical arsenic sensing, T. Pradeep, Anagha Jose, Arijit Jana, Tanvi Gupte, Keerthana Unni, Ankit Nagar, Amoghavarsha R. Kini, B. K. Spoorthi, application no. WO2024142079 A1, dated April 7, 2024.

Degree Holders

Ph.D. Graduates

1. Dr. Paulami Bose, Department of Chemistry, IIT Madras, 2024, "Interdimensional Chemistry of Atomically Precise Nanoclusters: A path to Functional Materials".
2. Dr. Vishal Kumar, Department of Chemistry and Department of Chemical Engineering, IIT Madras, 2024, "Studies on Physical and Chemical Changes by Triboelectricity".
3. Dr. Jayoti Roy, Department of Chemistry, IIT Madras, 2024, "Probing Chemical Interactions of Atomically Precise Nanoclusters with Mass Spectrometry".

4. Dr. B. K. Spoorthi, Department of Chemistry, IIT Madras, 2024, "Transformation of Molecules and Materials in Microdroplets".
5. Dr. S. Jenifer, Department of Chemistry and Department of Metallurgical and Materials Engineering, IIT Madras, 2024, "Studies on Aggregation in Microdroplets and Nanoclusters and Protein Binding for Arsenic Detection in Water".
6. Dr. Anil Kumar Avula, Department of Chemistry, IIT Madras, 2024, "Materials for Arsenic and Fluoride: A Study of Affordable and Sustainable Nanocomposites for Clean Water".

Dr. Vishal

Dr. Paulami Bose

Dr. B. K. Spoorthi

Dr. Anil Kumar Avula

Dr. S. Jenifer

Dr. Jayoti Roy

MS Graduates

1. Ramesh Kumar Soni, Department of Chemistry, IIT Madras, 2024, "Fabrication of Pilot Plant and Scale Manufacture of Cellulose-Based Nanomaterial for Arsenic Removal".

Ramesh Kumar Soni

Lectures Delivered

1. Affordable clean water using advanced materials, IITACB Saturday Webinar, January 13, 2024 (webinar).
2. Atomically precise clusters, Rasayan 18, Christ University, Bengaluru, January 29–30, 2024.
3. Atomically precise clusters: new advancements, Department of Chemistry, Purdue University, West Lafayette, February 1, 2024.
4. Affordable clean water using advanced materials, Engineering & Institute of Sustainable Future, Purdue University, West Lafayette, February 2, 2024.
5. Materials for water, Discussion with VT India Centre for Research & Innovation, February 2, 2024 (online).
6. Clathrate hydrates in interstellar environment, Department of Chemistry, University of Houston, Houston, February 9, 2024.
7. Atomically precise clusters: Towards megadalton molecules, 3rd DAE-BRNS Symposium on Current Trends in Analytical Chemistry (CTAC-2023), BARC, Mumbai, March 8, 2024.
8. Research excellence to impact, my story, Malaviya Mission Teacher Training Programme, IIT Madras, March 11–15, 2024.
9. Empowering India: Ideas for action by scientists and engineers, IIT Jammu, March 17, 2024 (with Krishnan Narayanan).
10. Roadmap to impactful innovation: my story, ITC Lifesciences & Technology Centre, Bangalore, May 10, 2024.
11. Affordable clean water using advanced materials, Eni Award Lectures, FEEM premises, Milan, May 21, 2024.
12. Empowering people using advanced materials, Prof. M. V. Pylee Award 2023, CUSAT, Cochin, May 30, 2024.
13. Carboranethiols: versatile ligands for atomically precise clusters, Penn State University, University Park, June 12, 2024.
14. Can microdroplets make soil?, Department of Chemistry, Purdue University, West Lafayette, June 17, 2024.
15. Treatment methods for arsenic, JJM Assam Lecture, IITM, June 20, 2024.
16. Can microdroplets make soil?, 11th National Conference on Recent Trends in Materials Science and Technology – 2024, IIST, Thiruvananthapuram, June 26, 2024.
17. Can microdroplets make soil?, University of Calicut, Calicut, June 27, 2024.
18. Can microdroplets make soil?, International Conference on Materials and Membranes for Water and Energy, CSMCRI, Bhavnagar, July 10–12, 2024.
19. Can microdroplets make soil?, INST Mohali, July 16, 2024.

Prof. T. Pradeep delivering a guest lecture on “Roadmap to Impactful Innovation” at ITC Life Science & Technology Centre, Bangalore, on May 10, 2024.

20. Can microdroplets make soil?, MIT World Peace University, Pune, July 19, 2024.

21. Can microdroplets make soil?, IISER Bhopal, July 29, 2024.

22. Can microdroplets make soil?,
Bangaluru India Nano, Bengaluru,
August 3, 2024.

23. Treatment methods for arsenic, India-
Israel workshop, ICCW, IIT Madras,
August 6, 2024.

24. Can microdroplets make soil?, IIT
Madras Colloquium, IIT Madras,
August 7, 2024.

25. Molecular acorns to institutional
oaks, Stella Maris College at 60,
Chennai, August 29, 2024.

26. Affordable clean water using advanced materials, FINERAC Presentation, August 29, 2024.

27. Affordable clean water using advanced materials, Teachers' Day Lecture, IIT Kharagpur, September 5, 2024.

28. Can microdroplets make soil?, Chemistry Department, IIT Kharagpur, September 6, 2024.

29. Affordable clean water using advanced materials, University of Oklahoma, Norman, September 25, 2024.

30. Can microdroplets make soil?, University of Oklahoma, Norman, September 27, 2024.

31. Can microdroplets make soil? A path
to sustainable nanotechnology,
University at Buffalo, Buffalo,
October 1, 2024.

32. Affordable clean water using
advanced materials, RENEW,
University at Buffalo, Buffalo,
October 2, 2024.

33. Affordable clean water using
advanced materials, As2024, KIT
Bhubaneswar, October 2, 2024.

34. Can microdroplets make soil?, KIT
South Campus, Karlsruhe, October 17, 2024.

35. Affordable clean water using advanced materials, KIT North Campus, Karlsruhe, October 18, 2024.

36. Can microdroplets make soil? A path to sustainable nanotechnology, W for W Foundation, Webinar, October 25, 2024.

Prof. T. Pradeep, after delivering a talk on "Can water microdroplets make soil?" at the Department of Chemistry, IISER Bhopal, July 29, 2024.

Prof. T. Pradeep delivering 'Catalyzing Conservations' talk on the topic of "Affordable clean water using advanced materials" at the University at Buffalo's RENEW Institute, October 2, 2024.

37. Glimpses of my work, lecture for students at the Department of Medical Sciences & Technology, IIT Madras, November 7, 2024.
38. Affordable clean water using advanced materials, (Chemistry) Meet 2024, Connecting at Konark, November 13, 2024.
39. Unlocking entrepreneurial potential in the water sector, ICCW Online, November 16, 2024.
40. Wastewater-based epidemiology, MoHUA - India-Israel Presentation, IIT Madras, November 18, 2024.
41. Carboranethiol-based clusters, EFCS, Farook College, Calicut, December 2–3, 2024.
42. Atomically precise metals clusters, CoE Winter School, IIT Madras, December 4, 2024.
43. Can microdroplets make soil?, CoE Winter School, IIT Madras, December 5, 2024.
44. Carboranethiol-based clusters, 2nd CoE Conference, IIT Madras, December 9–11, 2024.
45. Can microdroplets make soil?, 2nd Water for Life Conference, IIT Madras, December 12–14, 2024.
46. Can microdroplets make soil?, Conference on Advances in Catalysis for Energy and Environment (CACEE-2024), TIFR, Mumbai, December 16–20, 2024.
47. Matter in confinement - Clusters, microdroplets and clean water, Gitam University, Visakhapatnam, December 19, 2024.
48. Can microdroplets make soil?, ICL Presentation, December 24, 2024 – online.
49. Can microdroplets make soil?, Chem 24, IACS, Kolkata, December 27, 2024.

Lecture for students at the Department of Medical Sciences & Technology, IIT Madras, November 7, 2024.

Students' Activities

1. Bijesh Kumar Malla has given an oral presentation on " Photochemistry of Molecular Ices Under Ultrahigh Vacuum and Cryogenic Conditions," at the Physical Research Laboratory, Ahmedabad, India, January 5–7, 2024.
2. B. S. Sooraj visited the laboratory of Dr. Rodolphe Antoine, Institut Lumiere Materie, University of Claude Bernard Lyon 1, Lyon, France, January 23–February 8, 2024.
3. Soham Chowdhury presented a poster titled "Clathrate hydrates in simulated interstellar medium" at the 42nd meeting of the

Mr. B. S. Sooraj with Dr. Rodolphe Antoine, Institut Lumiere Materie, University of Claude Bernard Lyon 1, France January, 2024.

Astronomical Society of India (ASI) 2024, IISc., Bangalore, January 31–February 4, 2024.

4. Bijesh Kumar Malla visited Houston to work with Dr. Ding-Shyue Yang at the Department of Physical Chemistry, University of Houston, January–April, 2024.
5. Deepak Kumar Patel presented a poster titled “Macropolyhedral syn-B₁₈H₂₂, the ‘Forgotten’ Isomer” at the Gordon Research Conference (GRC) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 2–9, 2024.
6. Anagha Jose presented a poster titled “Vertically Aligned Nanoplates of Atomically Precise Co₆S₈ Cluster for Practical Arsenic Sensing” at the Gordon Research Seminar (GRS) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 3–4, 2024.
7. Swetashree Acharya has given an oral presentation on “Soft Synthesis of Molybdenum-oxo Clusters and Their Applications for Clean Water” at the Gordon Research Seminar (GRS) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 3–4, 2024.
8. Subrata Duary has given an oral presentation on “A Few Atomic Copper Nanoclusters with ‘Turn off’ Luminescence by Ambient Mechanical Grinding” at the Gordon Research Seminar (GRS) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 3–4, 2024.
9. Swetashree Acharya presented a poster titled “Formation of Metastable Dimers in the Reactions of Atomically Precise MAg₂₄(DMBT)₁₈ (M= Ag, Au, Pd, Pt) and Ag₂₉(BDT)₁₂ Clusters” at the Gordon Research Conference (GRC) on Atomically Precise Nanochemistry, Texas, USA, February 4–9, 2024.
10. Amoghavarsha R. Kini presented a poster titled “Nanomechanical Properties of Crystals of Cu₄ with Enhanced Hardness in Low-Density Isomorphs” at the Gordon

Ms. Anagha Jose with Prof. Jennifer S. Brodbelt, UT Austin, Texas, February 12 - April 29, 2024.

Mr. Bijesh Kumar Malla with Dr. Ding-Shyue Yang, University of Houston, Houston, January-April, 2024.

Research Conference (GRC) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 4–9, 2024.

11. Anagha Jose presented a poster titled “Vertically Aligned Nanoplates of Atomically Precise Co₆S₈ Cluster for Practical Arsenic Sensing” at the Gordon Research Conference (GRC) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 4–9, 2024.

12. Subrata Duary presented a poster titled “A Few Atomic Copper Nanoclusters with ‘Turn off’ Luminescence by Ambient Mechanical Grinding” at

the Gordon Research Conference (GRC) on Atomically Precise Nanochemistry, Galveston, Texas, USA, February 4–9, 2024.

13. Anagha Jose visited UT Austin, Texas, to work with Prof. Jennifer S. Brodbelt, February 12–April 29 2024.
14. Deepak Kumar Patel visited Institute of Physics and Institute of Inorganic Chemistry of Czech Academy of Science to work with Dr. Monika Kučeráková and Dr. Tomas Base March–December, 2024.
15. Riya Dutta has given an oral presentation at a webinar on Earth Day, organised by ICCW, IIT Madras, April 22, 2024.
16. Sujan Manna visited MIT, USA, to work with Prof. Loza Tadesse, Department of Mechanical Engineering, April–July, 2024.
17. Vivek Yadav has given an oral presentation on “Atomically Precise Carboranethiol-Protected Ag_{17} , AuAg_{16} , $\text{Ag}_{13}\text{Cu}_4$ and $\text{AuAg}_{12}\text{Cu}_4$ Nanoclusters” at the 7th International Symposium on Monolayer-Protected Clusters (ISMPC), Penn State University, USA, June 12–14, 2024.
18. Vivek Yadav has presented a poster titled “Atomically Precise Carboranethiol-Protected Ag_{17} , AuAg_{16} , $\text{Ag}_{13}\text{Cu}_4$ and $\text{AuAg}_{12}\text{Cu}_4$ Nanoclusters” at the 7th International Symposium on Monolayer-Protected Clusters (ISMPC), Penn State University, USA, June 12–14, 2024.
19. Deepak Kumar Patel visited the laboratory of Prof. Holger Braunschweig at Julius-Maximilians-University of Würzburg, Würzburg, Germany, June 2024.
20. Deepak Kumar Patel visited Karlsruhe Institute of Technology, Germany to work with Prof Manfred M. Kappes, June 2024.
21. Deepak Kumar Patel visited the Elettra Synchrotron Trieste facility, Italy and worked

Mr. Deepak Kumar Patel with Dr. Monika Kučeráková and Dr. Tomas Base at Elettra Synchrotron Trieste facility in Italy, June 2024.

Mr. Sujan Manna with Prof. Loza Tadesse, MIT, USA. April–July, 2024.

with Dr. Monika Kučeráková and Dr. Tomas Base, June 2024.

22. Vivek Yadav has presented a poster titled “Atomically Precise Carboranethiol-Protected Ag_{17} , AuAg_{16} , $\text{Ag}_{13}\text{Cu}_4$ and $\text{AuAg}_{12}\text{Cu}_4$ Nanoclusters” at the Gordon Research Conference (GRC) 2024 on Noble Metal Nanoparticles, Mount Holyoke College in Massachusetts, US, June 16–21, 2024.

23. S. Sudhir hosted a four-day program on entrepreneurship conducted by Thinkstartup at IITM Research Park, IIT Madras, July 3, 2024.

24. Keerthana Unni presented a poster titled "From Solutions to Microstructures in Minutes: Microdroplet Derived Stand-Alone TiO₂ Surfaces for Simultaneous Water Harvesting and Treatment" at the 33rd CRSI National Symposium in Chemistry (CRSINSC), Hyderabad, July 4–6, 2024.
25. Soham Chowdhury has given an oral presentation on "Composition-Dependent Clathrate Hydrate Formation of Trimethylene Oxide and Consequences of Dissociation" in the International Conference on Chemistry and Physics at Low Temperatures – 2024, Niseko, Hokkaido, Japan, July 6–11, 2024.
26. Bijesh Kumar Malla has given an oral presentation on "Insights into Interstellar Ice Photochemistry: Cryogenic Laboratory Studies" in the International Conference on Chemistry and Physics at Low Temperatures – 2024, Niseko, Hokkaido, Japan, July 6–11, 2024.
27. Sujan Manna presented a poster titled "Surface Enhanced Raman Spectroscopy of Atomically Precise Nanoclusters" at the Gordon Research Conference on Plasmonics and Nanophotonics, Newry, Maine, USA, July 7–12, 2024.
28. Sujan Manna gave a talk on "Raman spectroscopy" at the summer school, Tadesse lab, MIT, USA, July 17–18, 2024.
29. Keerthana Unni is visiting Purdue University to work with Prof. R. Graham Cooks, Purdue, August 2024–August 2025.
30. S. Sudhir conducted a workshop for YouthIdeathon 2024, a Startup Workshop at The Lords International School and Sana Model School, Chennai, August 13, 2024.
31. Subrata Duary visited the Stanford Linear Accelerator Center (SLAC), Stanford University, USA, to get trained in cryo-EM (Single Particle Analysis/SPA) technique under the supervision of Prof. Wah Chiu, August–November, 2024.
32. Sujan Manna has delivered an invited talk on "Ambient Morphology-Preserved Doping of Cu(0) to Anisotropic Gold Nanoparticles Through Reactions with Atomically Precise Nanoclusters" at the 11th Asian Conference on Nanoscience and Nanotechnology (AsiaNANO) 2024, IIT Madras, September 25, 2024.
33. Vivek Yadav has given an oral presentation on "Clustering of Clusters" at the 11th Asian Conference on Nanoscience and Nanotechnology (AsiaNANO) 2024, IIT Madras, September 25, 2024.
34. Tanmayaa Nayak presented a poster titled "Cellulose-Derived Nanomaterials for Affordable and Rapid Remediation of Uranium in Water" at the 9th International Congress and Exhibition on Arsenic in the Environment (As 2024), KIIT-DU, Odisha, October 20–24, 2024.
35. Sonali Seth presented a poster titled "Biopolymer-Based Adsorbent for Uranium Removal from Water" at the 9th International Congress and Exhibition on Arsenic in the Environment (As 2024), KIIT-DU, Odisha, October 20–24, 2024.
36. Bijesh Kumar Malla presented a poster on "Formation of Clathrate Hydrates under Simulated Interstellar Conditions" at the SoPhyc-Physical Chemistry Symposium 2024, IIT Bombay, October 22–25, 2024.

37. Amoghavarsha R. Kini has given an oral presentation on “Atomically Precise Nanoclusters: From Structure to Functions” at the Chemistry in-House Symposium (CiHS) – 2024, IIT Madras, October 29, 2024.
38. Vivek Yadav presented a poster titled “Atomically Precise Carboranethiol-Protected Ag_{17} , AuAg_{16} , $\text{Ag}_{13}\text{Cu}_4$ and $\text{AuAg}_{12}\text{Cu}_4$ Nanoclusters” at the Chemistry in-House Symposium (CiHS) – 2024, IIT Madras, October 29, 2024.
39. B. S. Sooraj Presented a poster titled “Ligand Dependent Metallicity in Au_{144} Nanoclusters Unveiled by Excited State Electron Dynamics” at the 5th International Conference on Emerging Advanced Nanomaterials (ICEAN 2024), Newcastle, Australia, November 4–8, 2024.
40. Sujan Manna presented a poster titled “Surface Enhanced Raman Spectroscopy of Atomically Precise Nanoclusters” at the FCS-OWLS conference, IIT Bombay, November 16–21, 2024.
41. Atrayee Datta, Anubhav Mahapatra and Riya Dutta visited the Satish Dhawan Space Centre (SDSC) SHAR, Sriharikota, the Spaceport of India, November 21, 2024.
42. Sonali Seth presented a poster titled “Biopolymer-Based Adsorbent for Uranium Removal from Water” at the International Winter School 2024 on Frontiers in Materials Science, JNCASR, Bangalore, December 2–6, 2024.
43. Samapti Mondal participated in the International Winter School 2024 on Frontiers in Materials Science, JNCASR, Bangalore, December 2–6, 2024.
44. Swetashree Acharya has given an oral presentation on “Reactions of Nanoclusters” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, December 9–11, 2024.
45. Amoghavarsha R. Kini has given an oral presentation on “Nanomechanical Investigations of Crystals of Cu_4 Nanocluster Isomorphs: Enhanced Hardness of the Low-Density Analogue” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, December 9–11, 2024.
46. Vivek Yadav presented a poster titled “Site-Specific Substitution in Atomically Precise Carboranethiol-Protected Nanoclusters and Concomitant Changes in Electronic Properties” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, December 9–11, 2024.
47. Harshita Nagar presented a poster titled “Rapid Determination of the Atomic Structure of Small Copper Nanoclusters with MicroED” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, December 9–11, 2024.
48. B. S. Sooraj has given an oral presentation on “Ligand Dependent Metallicity in Au_{144} Nanoclusters Unveiled by Excited State Electron Dynamics” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, held at IIT Madras, India, December 9–11, 2024.

- Anagha Jose has given an oral presentation on “Vertically Aligned Nanoplates of Atomically Precise Co_6S_8 Cluster for Practical Arsenic Sensing” at the 2nd edition of International Conference on Water for Life – 2024, IIT Madras, December 12–14, 2024.
- Sinchan Mukhopadhyay presented a poster titled “Spontaneous α -C–H Carboxylation of Ketones by Gaseous CO_2 at the Air-water Interface of Aqueous Microdroplets” at the 2nd edition of the International Conference on Water for Life – 2024, IIT Madras, December 12–14, 2024.
- Tanmayaa Nayak has given an oral presentation on “Cellulose-Derived Nanomaterials for Affordable and Rapid Remediation of Uranium in Water” at the 2nd edition of the International Conference on Water for Life – 2024, IIT Madras, Chennai, December 12–14, 2024.
- Sonali Seth presented a poster titled “Biopolymer-Based Adsorbent for Uranium Removal from Water” at the 2nd edition of the International Conference on Water for Life – 2024, IIT Madras, December 12–14, 2024.
- Vivek Yadav presented a poster titled “Site-Specific Substitution in Atomically Precise Carboranethiol-Protected Nanoclusters and Concomitant Changes in Electronic Properties” at the Conference on Advances in Chemistry for Energy and Environment (CACEE), TIFR Mumbai, December 16–20, 2024.

Students’ Recognitions

- Dr. B. K. Spoorthi has received the Best Thesis Award of Chemistry Department, IIT Madras at the 2024 convocation, July 19, 2024.
- Keerthana Unni has received the best poster Award for “From Solutions to Microstructures in Minutes: Microdroplet Derived Stand-Alone TiO_2 Surfaces for Simultaneous Water Harvesting and Treatment” at the 33rd CRSI National Symposium in Chemistry (CRSI-NSC), Hyderabad, July 4–6, 2024.
- Amoghavarsha R. Kini has received the International Immersion Experience (IIE) travel award 2024, funded by IIT Madras.
- Swetashree Acharya has received the International Immersion Experience (IIE) travel award 2024, funded by IIT Madras.
- Riya Dutta and Sujana Manna won the Asian Paint Alchemy competition held in Mumbai, March 15, 2024.
- Bijesh Kumar Malla has received the best poster award for “Formation of Clathrate Hydrate under Simulated Interstellar Conditions” at the Physical Chemistry Chemical Physics (PCCP) at the SoPhyc-Physical Chemistry Symposium 2024, IIT Bombay, India, October 22–25, 2024.

Dr. B. K. Spoorthi has received the Best Thesis Award of Chemistry Department, IIT Madras, July 29, 2024.

7. Amoghavarsha R. Kini won the best oral presentation award for “Atomically Precise Nanoclusters: From Structure to Functions” at the Chemistry in-House Symposium (CiHS)-2024, IIT Madras, October 29, 2024.
8. Sujan Manna has received the International Immersion Experience (IIE) travel award 2024, funded by IIT Madras.
9. Sujan Manna became one of the top 20 finalists in the ‘Science in Focus’ competition organized by India Science Fest, IISER Pune, November 2024.
10. Vivek Yadav has received the best poster award for “Atomically Precise Carboranethiol-Protected Ag₁₇, AuAg₁₆, Ag₁₃Cu₄ and AuAg₁₂Cu₄ Nanoclusters” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, December 9–11, 2024.
11. S. Sudhir became one of the finalists in the 'Build to Innovate: Rural-Agri Challenge' by IITM Incubation Cell, June 15, 2024.
12. S. Sudhir became the runner up in the ‘Next Gen Digital Action’, a global youth initiative part of Digital Tech Summit 2024 to enable diverse youth-led ideas, perspectives and action on digital technologies transforming societies, hosted by DTU, Denmark, October 31, 2024.
13. Harshita Nagar has received the best poster award for “Rapid Determination of the Atomic Structure of Small Copper Nanoclusters with MicroED” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, 9–11, December 2024.
14. Deepak Kumar Patel has received the best poster award for “Molecular Rotor with Conformation-Dependent Dipole Moment” at the 2nd edition of CoE International Conference on Molecular Materials and Functions – 2024, IIT Madras, December 9–11, 2024.
15. Vivek Yadav won a recognition for asking most interesting questions at the Conference on Advances in Chemistry for Energy and Environment (CACEE), TIFR, Mumbai, December 16–20, 2024.

Alumni News

1. Dr. Bindhu Alappat has joined as the Vice President of Academic Affairs at Holy Family University, USA.
2. Dr. Tanvi Gupte has joined as a postdoc at Columbia University, USA.
3. Dr. Tripti Ahuja has joined as a postdoc in CSIR-CDRI, Lucknow.
4. Dr. Gaurav Vishwakarma has joined as a postdoc at National University of Singapore.
5. Dr. Vishal Kumar has joined as a postdoc at National Taiwan University, Taiwan.
6. Dr. Jayoti Roy has joined as a postdoc at Karlsruhe Institute of Technology, Germany.
7. Dr. B. K. Spoorthi has joined as a postdoc at Purdue University, USA.
8. Mr. Devansh Paliwal has joined as a doctoral student at ETH Zurich, Switzerland.
9. Ms. K. S. Aswathi has joined as a doctoral student at Texas A&M University, USA.
10. Ms. Karthika Kalyansundar has joined as a doctoral student at Ohio University, USA.

11. Dr. Anish R. Nath has joined as a senior executive at MRF Limited, Chennai.
12. Mr. S. Jayaram has joined as a technical officer - MA3 grade at MRF Limited, Chennai.

Research Grants

Ongoing Projects

1. JC Bose Fellowship, DST 2015–2020; renewed 2021, DST, Rs. 90 lakhs.
2. Fingerprinting authenticity of ayurvedic preparations by ambient electrospray deposition Raman spectroscopy, SHRI proposal, DST, Rs. 53.8884 and 41.3656 lakhs for IITM and Manipal Academy of Higher Education respectively. (principal investigator with Santhosh Chidangil, Manipal, Co-PI)
3. Atomically precise naked cluster assemblies from ligand-stabilized clusters: New materials for catalysis, DST/DFG, Rs. 72.028 lakhs. (principal investigator, with Manfred Kappes)
4. National facility of cryo-electron microscopy: Remotely operable, 24x7 for academia and industry, SERB, Rs. 28.6 crores (principal investigator) with IIT Tirupati, IISER Tirupati, IIT Palakkad, RGCB Thiruvananthapuram, Sastra Tanavur, VIT Vellore and MRF Chennai.
5. Carborane-protected metal nanoclusters: A new family of materials with atomic precision - DST/Czech, Rs. 37 lakhs. (principal investigator, with Tomas Base)
6. Centre of Excellence on Molecular Materials and Functions, Ministry of Education, Rs. 16.8 crores. (principal investigator)
7. Atomically precise materials for sustainable water and energy harvesting, SERB, Rs. 75.32 lakhs. (principal investigator)

Others, such as R&D Awards, technology development, CSR grants, and instrument maintenance activities, are also managed as projects.

Consultancy

1. Steel – Rubber adhesion improvement – Phase 2, MRF Ltd., 2019–2021, Rs. 1.2 Cr. (principal investigator)

Implementation Projects

There are several other implementation projects taken through the International Centre for Clean Water.

Visitors

1. Mr. Girish Agarwal, Dr. Pooja Agarwal, Dr. Gaurav Singh and Mr. Faraz Farooqui, Crypto Relief, January 6, 2024.
2. Dr. Mamata Bangera, Birkbeck, University of London, January 16, 2024.

3. Joseph Cheriyan, Deputy General Manager Secretarial-CSR-ESG, Dr. A. Sreekumaran Nair, Corporate Manager (R&D), MRF, January 19, 2024.
4. Shri Kailash Karthik N, IAS, Mission Director, Jal Jeevan Mission, Assam, Varadharajan Ranganathan, TDK Ventures Innovation Hub, and Dr. Shubhra Shukla, Jivass Technologies, January 25, 2024.
5. Prof. Roop Mahajan, Professor, Department of Materials Science and Engineering, Former Director of Institute for Critical Technology and Applied

Prof. T. Pradeep and Gaurav Sing (seated), CEO, Blockchain for Impact, with the team during the launch of 'Q Exactive Plus' as a part of the Waste Water Based Epidemiology (WBE) Project, IIT Madras, January 6, 2024.

Prof. Roop Mahajan, Former Director of Institute for Critical Technology and Applied Sciences; and Dr. M.K. Padmanabhan, Director of the Virginia Tech, February 10, 2024.

Sciences, Prof Emeritus Virginia Tech, and Dr. M.K. Padmanabhan, Director of Virginia Tech, India, February 10, 2024.

6. Prof. Suresh Bhargava, Distinguished Professor, AM - Member of Order of Australia (Queens Civilian Honour 2022), Director for CAMIC, STEM College, RMIT University, February 22, 2024.

7. ENI team - Sara Scagliotti, Andrea Lainati, Andrea Bartolini, Ilaria Reitano, February 22–23, 2024

8. Dr. Venugopal Vijaykrishnan, Dr. Gayathri Subramanyam, Dr. Devi Sirisha Janni, ITC Life Science & Technology Centre, Bangalore, March 15, 2024.

9. Ms. Noa Amsalem, Water Attaché- International Development Cooperation (MASHAV) and David Emanuel Kasman, Project Manager from Consulate General of Isreal, March 19, 2024.

Prof. T. Pradeep, with Kailash Karthik N, Mission Director at Jal Jeevan Mission, Varadharajan Ranganathan, TDK Ventures Innovation Hub and Nandakumar E, ICCW, January 25, 2024.

Prof. T. Pradeep, with Prof. Suresh Bhargava, Distinguished Professor, AM - Member of Order of Australia, Director for CAMIC, STEM College, RMIT University, February 22, 2024.

10. Dr. Aysha Swapna, Principal of Farook College, Dr. T. Shalina Begum, Dr. Reji Thomas, Mr. Mohammed Nishad Maniparambath, Mrs. S. Bodhy Krishna, Mrs. T. P. Shabna and Dr. M. Yoosuf Ameen, Farook College, Kerala, March 20, 2024.

11. Shri. M.K. Narayanan, 19th Governor of West Bengal and former NSA, March 22, 2024.

12. Dr. Sudip Chakraborty, Reader F, Harish-Chandra Research Institute (HRI), an Aided Institute of Department of Atomic Energy (DAE), Allahabad, May 5, 2024.

Prof. T. Pradeep, with ENI team members (Ilaria Reitano (left) and Sara Scagliotti, Andrea Lainati, Andrea Bartolini (right), with M. Udhaya Shankar and Prof. T. Pradeep, February 23, 2024.

Prof. T. Pradeep with Dr. Venugopal Vijaykrishnan, Dr. Gayathri Subramanyam and Dr. Devi Sirisha Janni, ITC Life Science & Technology Centre, Bangalore, March 15, 2024.

13. Mr. Ramasamy Narayanan, Head, Sustainability; Mr. Nareshkumar Katakam, Senior Manager, Sustainability; Monisha Suyenlai, Assistant Manager, Sustainability, A Sreekumaran Nair, Corporate Manager, R&D; MRF, May 24, 2024.

14. Mr. Bhajan Singh, NSF India, June 5, 2024.

15. Prof. Gaurav Chopra, Associate Professor, Department of Chemistry, Purdue Institutes for Drug Discovery, Cancer Research, Neuroscience, Immunology, Purdue University, June 21, 2024.

16. Dr. Soumyabrata Roy, Research Scientist, Ajayan Research Group, Materials Science & Nanoengineering, Rice University, USA, June 22, 2024.

Prof. T. Pradeep, with Shri. M. K. Narayanan, 19th Governor of West Bengal, March 22, 2024.

Prof. T. Pradeep, with Mr. Ramasamy Narayanan -Head, Mr. Nareshkumar Katakam - Senior Manager, Monisha Suyenlai, Assistant Manager, Sustainability and A Sreekumaran Nair - Corporate Manager, R&D, May 24, 2024.

Annual Report 2024

17. Mr. K.K. Mishra, President of Product & Business Development, Mr. Hemang Patel, G.M (R&D), 20 Microns Nano Minerals Limited, Gujrat, July 23, 2024.

18. Dr. Ajay Chandak, Certified Energy Auditor & Renewable Energy Expert, Chandak Innovations LLP, Shamgiri, August 5, 2024.

19. Suzan Kagan, visiting PhD student from Tel Aviv University, coordinated the course ID5011, People's Water Data, and also participated in several measurements in the field, August–November, 2024.

20. Prof. Kuruvilla Joseph, outstanding Professor & Dean, Indian Institute of Space Science and Technology (IIST), September 6, 2024.

Suzan Kagan, visiting PhD student from Tel Aviv University, collecting water quality data as a part of the course, 'People's Water Data', August–November, 2024.

21. Prof. Sabu Thomas, former VC of MG University, September 11, 2024.

22. Dr. Tofayel Ahmed, Associate Professor 'E', Saha Institute of Nuclear Physics, October 7, 2024.

23. Prof. S. Chandrasekaran, Department of Organic Chemistry, IISc Bangalore, November 5, 2024.

24. Prof. Dr. Mukundan Thelakkat, Professor of Applied Functional Polymers, University of Bayreuth, Germany, November 10, 2024.

25. Prof. T. Venkatesan, Senior Advisor, office of Vice President for Research and Partnerships, Founding Director of Center for Quantum Research and Technology, Prof. of Physics and ECE, University of Oklahoma, November 14, 2024.

Prof. T. Pradeep with Prof. Sabu Thomas, former VC of MG University, September 11, 2024.

Prof. T. Pradeep with Prof. Gaurav Chopra, Associate Professor at Purdue University, June 21, 2024.

Prof. S. Chandrasekaran, Professor of Organic Chemistry, IISc Bangalore, had an interaction with students of the group, November 5, 2024.

Prof. Mukundan Thelakkat, Professor of Applied Functional Polymers, University of Bayreuth, Germany, delivered talk at IIT Madras, November 10, 2024.

Prof. T. Pradeep and his students with Prof. T. Venkatesan, Director of the Center for Quantum Research and Technology, University of Oklahoma, November 14, 2024.

26. Dr. Ruchi Gupta, Associate Professor in Biosensors, Global Engagement Lead for School of Chemistry, University of Birmingham, November 25, 2024.

27. Prof. Arieh Ben-Naim, Department of Physical Chemistry, The Hebrew University of Jerusalem, December 4, 2024.

Prof. T. Pradeep with Padma Vibhushan Dr. R. A. Mashelkar, FRS; Prof. V. Kamakoti, Director of IITM, and Prof. Rajnish Kumar, Director's Office, IIT Madras, December 8, 2024.

Prof. Arieh Ben-Naim, Professor at the Hebrew University of Jerusalem, with Prof. K. Mangala Sunder and Prof. T. Pradeep at the Department of Chemistry, IIT Madras, December 26, 2024. He gave two talks in Chemistry on December 23 and 26, 2024.

28. Padma Vibhushan Dr. R. A. Mashelkar, FRS, December 8–9, 2024.

Several other visitors came for the four conferences we conducted during the year.

Visits

1. Venus Safety & Health Pvt. Ltd., Mumbai, January 2, 2024.
2. Stella Maris College (Autonomous), Chennai, as the chief guest for the Graduation Day, January 10, 2024.
3. Christ University, Bangalore, to receive the CRS Gold Medal Award in the Symposium: "Science Beyond Boundaries: Invention, Discovery, Innovation and Society - Rasayan 18", January 29, 2024.
4. Department of Chemistry, Purdue University, February 1, 2024 and Environmental and Ecological Engineering, Purdue University, February 2, 2024.

Annual Report 2024

- Galveston, Texas, USA, chair of the Gordon Research Conference (GRC) on Atomically Precise Nanochemistry, February 4–9, 2024.
- IIT Bombay, Mumbai, Chair of the Symposium of Cryo-EM Facility, March 8, 2024.
- Bhabha Atomic Research Centre (BARC), Mumbai, the 3rd DAE-BRNS Symposium on Current Trends in Analytical Chemistry (CTAC-2023), March 8, 2024.
- IIT Jammu, 'Abhyuthanam: Academic Leadership Program on behalf of the Ministry of Education of India, March 15–19, 2024.

Prof. T. Pradeep with all the participants at the Gordon Research Conference, Texas, USA, February 4–9, 2024. Prof. Pradeep was the Chair of the conference.

Prof. T. Pradeep with Arvind Raman, Dean of Engineering, Purdue, February 14, 2024.

- Stella Maris College (Autonomous), Chennai, SMC Research Council Advisory meeting, March 22, 2024.
- IISER Pune, progress review meeting of SUPRA, April 9, 2024.
- INST, Mohali, 18th BoG meeting, April 12, 2024.
- Delhi, the nominations of INSA Fellowship (IYA, IAF, IDL-1, and IDL-2 for the year 2024), April 24, 2024.
- Delhi, to receive the Eminent Engineers' Award 2023 - Research & Consultancy category by Engineering Council of India, April 29, 2024.
- ITC Life Science & Technology Centre, Bangalore, for a guest lecture, May 10, 2024.
- University of Bayreuth, Germany, May 15–19, 2024.
- Milan, Italy, Scientific Commission annual meeting of the Prize Commission of Eni Award 2024 edition at FEEM premises, May 20, 2024.
- SANJOG 2024-Workshop for Children of Army JCs/Jawans and Family, IIT Madras, June 9, 2024.

Prof. T. Pradeep with the researchers at ITC, Bangalore, May 10, 2024.

Visit to Purdue. Prof. T. Pradeep with Prof. Graham Cooks, after a talk, June 17, 2024.

18. Cochin University of Science and Technology, Kerala, to receive the 'Prof. M. V. Pylee Award' for the distinguished academician in India for the year 2023, May 30, 2024.

19. Penn State University, Pennsylvania, USA, the 7th International Symposium on Monolayer Protected Clusters (ISMPC24), June 12–14, 2024.

20. Visit to Purdue University, June 15–18, 2024.

21. IIST, Thiruvananthapuram, the 11th National Conference on Recent Trends in

Meeting on WTC project at Nallampatti, Tamil Nadu, August 4, 2024.

Materials Science and Technology, June 26, 2024.

22. Calicut University, Kerala, National Conference on Advanced Materials (NCAM) 2024, June 27, 2024.

23. CSIR-CSMCRI Bhavnagar, Gujarat, International Conference on Materials and Membranes for Water and Energy (ICMMWE)-2024, July 10–12, 2024.

24. MIT World Peace University (MIT-WPU), Pune, first National Scientists Round Table Conference (NSRTC 2024) for Viksit Bharat 2047, July 19, 2024.

25. IISER Bhopal, attended the technical review meeting and delivered a talk at the Department of Chemistry, July 29, 2024.

Prof. T. Pradeep with Prof. Horst Hahn at the Advanced Radar Research Centre, University of Oklahoma, September 26, 2024.

26. Bangalore, as a plenary speaker in the 13th Edition of Bengaluru India Nano, August 3, 2024.

27. Nallampatti, Tamil Nadu, for meeting on WTC project, August 4, 2024.

28. Pondicherry, along with Mr. Ashok Natarajan, meeting with Dr. Dhinadayalan, Secretary PWD, August 21, 2024.

US National Academy of Engineering (NAE) Annual Meeting 2024, with the class of 2024, September 29, 2024.

Prof. T. Pradeep with Krishna Rajan, SUNY Distinguished Professor, Thomas Thundat, SUNY Empire Innovation Professor and Haiqing Lin, Professor, University at Buffalo, October 2, 2024.

29. Stella Maris College, Chennai, Diamond Jubilee of the Department of Chemistry, August 29, 2024.
30. 19th BoG meeting (online) of INST, Mohali, August 30, 2024.
31. IIT Hyderabad, National Programme on Nano Science & Technology (NPNST), a brainstorming session for the preparation of a vision document on advanced materials, September 2–3, 2024.
32. IIT Kharagpur, institute lecture at the School of Nano Science and Technology, September 5, 2024.

Prof. T. Pradeep with Thomas Thundat, and Amit Goyal, SUNY Empire Innovation Professors, University at Buffalo, October 3, 2024.

At Eni Award 2024 prize giving ceremony in front of Palazzo del Quirinale in Rome, Italy, October 15, 2024.

33. University of Oklahoma, to deliver lectures and explore collaborations, September 24–27, 2024.
 34. Washington, D.C., USA, invited to the National Academy of Engineering (NAE) Annual Meeting-2024, September 28–30, 2024.
 35. University at Buffalo, New York, as a distinguished speaker for the RENEW 'Catalyzing Conversations' talk, October 1–3, 2024.
 36. Bangalore, an innovation tour for the course ID5031: Innovation and Entrepreneurship – a multidisciplinary approach, October 8, 2024.
37. Palazzo del Quirinale in Rome, Italy, for the Eni Award 2024 prize giving ceremony, October 14, 2024.
 38. Visit to KIT, Germany, as part of the International Excellence Award, October 15–19, 2024.
 39. Meeting with Rahul Mammen Mappillai, Managing Director, MRF Ltd, October 30, 2024.

Prof. T. Pradeep with Prof. Thomas Hirth, Vice President at KIT, and Prof. Manfred M. Kappes, KIT, Germany, October 2024.

Prof. T. Pradeep with Rahul Mammen Mappillai (left), Managing Director, MRF Ltd, October 30, 2024.

At the National Conference on Emerging Frontiers in Chemical Science (EFCS)-2024, Farook College, Kerala, December 2–3, 2024.

40. Konark, Odisha, for the Chemistry Meet 2024 at Lotus Eco Beach Resort, November 13, 2024.

41. Participated in the one-day symposium, in connection with the anniversary celebrations on the completion of the 60th year of the journal Chemical Communications, Royal Society of Chemistry at IIT Madras, November 18, 2024.

Prof. T. Pradeep with Prof. Krishna, Dean and Prof. GVR Sharma, Director, Faculty Development at GITAM University, Visakhapatnam, December 4, 2024.

42. Sacred Heart College, Thevara, Kerala, as an invited keynote speaker in the 23rd Prof. K. V. Thomas Endowment National Seminar on Frontiers in Materials Science, November 27, 2024.

43. Farook College, Kerala, chairman of the National Conference on Emerging Frontiers in Chemical Sciences (EFCS), December 2–3, 2024.

44. Conducted International Advisory Board (IAB) of the Centre of Excellence on “Molecular Materials and Functions at IIT Madras, December 8, 2024.

Prof. T. Pradeep with Dr. Anil Kakodkar as part of the CACEE-2024 event, TIFR, Mumbai, December 16, 2024.

45. Tata Institute of Fundamental Research (TIFR) Mumbai, conference on Advances in Catalysis for Energy and Environment (CACEE-2024), December 16, 2024.

46. GITAM Deemed to be University, Hyderabad, delivered a distinguished lecture followed by interaction with the faculty members to discuss the possibilities of advanced research at GITAM facilities, December 19, 2024.

47. JECRC University, Jaipur, Rajasthan, for the ‘Acharya Prafulla Chandra Ray Memorial Award 2023’ at the 61st ACC 2024 Annual Convention of Chemists and International Conference, December 19–21, 2024 (to be received in 2025).

48. IACS Kolkata, Chem24, December 27, 2024.

Services

1. Chairman, Board of Governors, Institute of Nano Science and Technology, Mohali, 2021–2024.
2. Member, Research Advisory Council, Manipal Academy of Higher Education, Manipal Member, 2018–
3. Research Advisory Board, Pandit Deendayal Petroleum University, 2019–
4. Member, Technical Committee for examination and use of innovations and technologies in drinking water and sanitation sector, Department of Drinking Water and Sanitation, Ministry of Jal Shakti, 2019–2024.
5. Associate Editor of the journal, ACS Sustainable Resource Management, 2024–; Chemistry of Materials, 2018–; ACS Nano, 2018–; Nanoscale Advances, 2019–; Clean Water, 2020–; Chemical Communications, 2020–2024; Environmental Science: Water Research & Technology, 2023–; ACS Environmental Science and Technology 2024–; The Journal of Physical Chemistry Letters, 2024–

Incubation

- Hydromaterials has installed village water treatment units, altogether supplying arsenic and iron-free water to over 1000,000 people. In many places, we have addressed uranium contamination as well. Altogether, there are around 1700 units of this kind operational in our country, supplying clean water to 1.4 million people. This year's highlights include: ongoing execution of 59 village water treatment plants in Uttar Pradesh, ongoing installation of district-wide automation in Himachal Pradesh, successful installation of 2,500 water filters for Anganwadis and ongoing installation of 5,850 automatic water filters for Anganwadis and schools in Andhra Pradesh. For more details, please visit <https://hydromaterials.in/>
- VayuJal Technologies has installed a solar and grid power operated 2000 litres per day (LPD) atmospheric water harvesting unit at Engineers India Limited, Gurugram, Haryana, and at Gram Vikas - Brahmapur, Odisha. They have five variants of atmospheric water generators now with daily drinking water production from 43 to 2800 liters per day. VayuJal now has 130 machines in 29 states in India and Europe & Sri Lanka, catering to more than 4800

VayuJal was awarded the Climate Smart Innovation Exhibition & Award (CSI) 2024, organised by Solar Decathlon India at Infosys, Mysore.

people with drinking Water from Air. VayuJal is catering to industry segment leaders such as ITC Chola, ITC Life Science, Toyota Industries, Tata Communications, NASSCOM, IIT Madras, IIT Jammu, DRL-DRDO, IOCL, HPCL, Shell, JCBL, Tata Reality, L&T, Sify, etc. Highlights include: winner of the Climate Smart Innovation Exhibition & Award (CSI) 2024 - Organised by Solar Decathlon India at Infosys-Mysore.; winner of the NASSCOM Foundation Climate Tech Challenge – 2024. For more details, please visit <https://vayujal.com/>

- AquEasy Innovations Private Limited is an Indian company incubated by IIT Madras working in the field of domestic water purification technologies. AquEasy currently develops contaminant specific water purifier bottles, called the ‘blue bottle’. Also, the company has developed a rolling water purifier called ‘roll pure’ that helps in reducing the effort in water transportation and provides clean water, when the water reaches the point of use. For more details, please visit <https://www.ynos.in/startup/aqueasy>
- EyeNetAqua Solutions Private Limited is a start-up company incubated at ICCW to develop and commercialize IoT-based sensing technologies for water quality monitoring. In the past EyeNetAqua has demonstrated inline measurements of pH, TDS, residual chlorine, nitrate, pressure and volume of flow for source water quality monitoring. For more details, please visit <https://www.eyenetaqua.com/>

Centres

International Centre for Clean Water (ICCW)

The International Centre for Clean Water (ICCW), an initiative of IIT Madras has completed five years of its existence. Located at the IIT Madras Research Park, the Centre has developed and implemented technologies for real-time water quality and flow monitoring to support the Indian government’s ambitious plans to implement Drink from Tap facilities

Installation of CDI technology-based drinking water system in Gandhipura.

across the country. In

partnership with the Embassy of Israel, New Delhi, ICCW has initiated capacity-building programs for senior officials of the Ministry of Urban and Housing Affairs.

For the industrial sector, ICCW has developed solutions for recovery of materials and clean water from effluents, evaluated water initiatives and conducted water audits and certification programmes to help them in their quest for “Net Zero Water”. ICCW has completed a household water security study for Ramanthapuram district and implemented over 130 safe drinking water solutions for communities, using emerging technologies that save carbon and water footprints,

with awareness programmes and behavioural change initiatives. Impact assessment for these projects and projects of other organisations has been added to the portfolio.

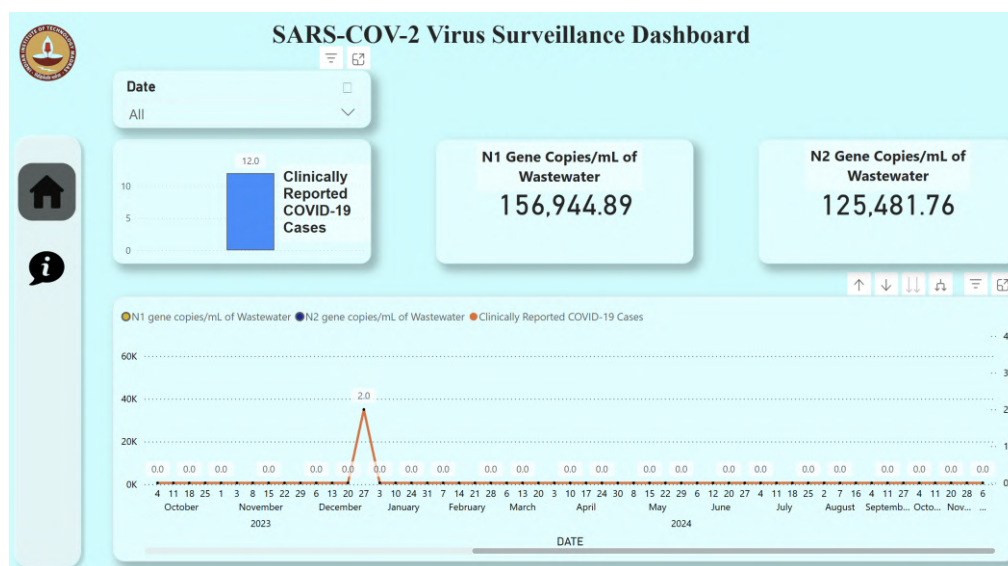

ICCW strengthened its support for startups by creating a Waterpreneur Studio – an ecosystem dedicated to startups in the water sector. Over 20 startups are being mentored at various stages of their evolution with a panel of experts. ICCW's international forays include being the India Challenge Owner for the 4th edition of the Atal Innovation Mission -Innovation Centre Denmark Challenge, and an MOU with Feng China University, Taiwan to bring sustainable water solutions to India. For more details, please visit <https://iccw.world/>

Wastewater-Based Epidemiology (WBE)

We have established a new research centre to test municipal wastewater for pathogens and chemicals and make the data available to the public and other potential stakeholders. This facility acts as an intelligence unit to track and prevent disease outbreaks in its early stages.

The WBE study is performed by analyzing biological and chemical human urinary biomarkers in wastewater. The WBE tool tracks pollutants, pesticides, licit and illicit drugs, and personal care products to which the population is exposed.

We recently created an online dashboard to track SARS-CoV-2 viruses circulating in IIT Madras community. The samples are analysed once a week and the data for the whole year are on the dashboard. An image of the dashboard is shown below. For more details, please visit <https://usedwateranalytics.org/>

ANRF National Facility for Cryo-Electron Microscopy

DST-ANRF has set up a world-class cryo-electron microscopy facility at IIT Madras to provide a platform for researchers in and around IIT Madras.

We have initiated the setup of a cryo-electron microscopy imaging suite equipped with state-of-the-art infrastructure. We provide high-resolution analysis of a variety of samples, including

those from life sciences, materials science, and environmental sciences, to obtain new insights. For more details, please visit <https://cryoem.iitm.ac.in/>

SERB-ANRF national facility of cryo-EM: Krios G4 (left) and Talos F200i (right) at IIT Madras.

This year, we organized the 1st International Symposium on Cryo-Electron Microscopy, followed by a hands-on workshop on Microcrystal Electron Diffraction (MicroED) by Prof. Brent L. Nannenga, Associate Professor of Chemical Engineering, Arizona State University.

Time	Event
Day 01 - 09 August 2024	
8:00 - 08:45	Registration @ ICSE, IIT Madras
08:45 - 08:55	Assembling @ Cryo-EM Center
09:00	Photograph followed by entry of delegates to the Cryo-EM Center (in the presence of Director, IIT Madras, SERB (DR) committee members)
09:00 - 09:15	Tour of the Facility @ Cryo-EM Center
09:15 - 09:30	Assembling @ ICSE @ T1 Jagannathan Auditorium
09:30 - 09:35	Welcome address - T. Pradeep
09:35 - 09:37	Video - Making of Cryo-EM facility
09:37 - 09:42	Director's address - V. Kamalak
09:42 - 09:44	Felicitations - Jyoti Jagannathan, ICSE Pune
09:44 - 09:46	Felicitations - Sangeetha Kumar, HOD Chemistry
09:46 - 09:48	Felicitations - G. Shekar, Incoming HOD Chemistry
09:48 - 09:50	Felicitations - R. Ravi Krishna, HOD Chemical Engineering
09:50 - 09:52	Felicitations - Sangeetha Kumar, HOD Biotechnology
09:52 - 09:54	Felicitations - Chandrabhan Narasim, IISER Pune
09:54 - 09:56	Felicitations - Sravan Kumar, IIT Madras
09:56 - 09:58	Felicitations - S. Swaminathan, SASTA
09:58 - 10:00	Felicitations - R. Vijayaraghavan, VIT
10:00 - 10:05	Vote of Thanks - Rajesh Kumar
10:05 - 10:30	High Tea @ T1 @ Jagannathan Auditorium
10:30 - 11:15	Session 01 - Chair: Jayanti Siddhanta, IISER Pune Plenary Lecture 1 - 01 Wah Chiu, Stanford University Theme: Recent Advances in Cryogenic Electron Microscopy and Tomography
11:15 - 11:45	Invited Lecture 02 Manjula Banerjee, IIT Delhi Theme: Reconstructing dynamic processes in the viral life cycle using cryo-electron microscopy

Time	Event
Day 02 - 10 August 2024	
11:45 - 12:15	Invited Lecture 03 Saket Choudhury, CSIR-CCMB Theme: Overcoming Preferred Orientation in cryo-EM: Insights into 2D crystal Mediated Axis-Alignment
12:15 - 12:45	Invited Lecture 04 Ajay Kumar Singh, IIT Kanpur Theme: Structural studies on nuclear receptor receptors
12:45 - 01:15	Invited Lecture 05 Sangeetha Kumar, IIT Madras Theme: Cryo-EM structure of the Sialin/oval of S. A. F.
01:15 - 02:30	Lunch
Session 02 - Chair: Anil Sharma, IISER Pune	
02:30 - 03:00	Invited Lecture 06 Praveen S. Ramesh, IISER Pune Theme: Cryo-EM studies of ribosome from pathogenic protease Entamoeba histolytica reveal unique features of its architecture
03:00 - 03:30	Invited Lecture 07 Hema Chandra Kulkarni, IIT Madras Theme: Knotted proteins: A tale to untangle
03:30 - 04:00	Invited Lecture 08 Chen Rendong, Thermo Fisher Scientific Theme: Optimizing automated cryo-TEM data collection strategies with energy filter and direct electron detector
04:00 - 04:15	Tea Break
Session 03 - Chair: Aditya Nageshwar, IIT Madras	
04:15 - 05:00	Plenary Lecture 03 - 03 Mark Abuter, Stanford University Theme: Gold nanoparticles in the Era of the Revolution Revolution
05:00 - 05:30	Invited Lecture 09 Sachin Bhowmik, IISER Pune Theme: Evolution of Single Particle CryoEM from Blob to True Atomic Resolution
05:30 - 05:45	Group Photograph
05:45 - 06:15	Assembling @ ICSE Entrance - Transportation for Dinner
06:15 - 06:30	Dinner @ ICSE

Time	Event
Day 02 - 10 August 2024	
Session 04 - Chair: Rajesh Kumar, IIT Madras	
09:00 - 09:45	Plenary Lecture 04 - 11 Brent Nannenga, Arizona State University Theme: Development and Application of Microcrystal Electron Diffraction (MicroED)
09:45 - 10:15	Invited Lecture 12 H. Manoj, IIT Madras Theme: Unraveling the structural basis of reaction specificity in PLA-dependent decarboxylation
10:15 - 10:30	Tea Break
Session 05 - Chair: Dilip Vasudevan, IISER Pune	
10:30 - 11:00	Invited Lecture 13 Srinivas Trilok, Birla Institute Theme: A tale of two kinases: Unraveling the mechanistic differences between DR1 and DR2 using CryoEM and other tools
11:00 - 11:30	Invited Lecture 14 Vidya Mangala Prasad, IISER Pune Theme: Cryo-EM analysis of carbonic anhydrase by freshly neutralizing antibodies
11:30 - 12:00	Invited Lecture 15 Husban Bhavik, IISER Trirupur Theme: Signal induced antibiotic biosynthesis in Streptomyces
12:00 - 12:30	Invited Lecture 16 Manjula Banerjee, Stanford University of London Theme: Tracing the cytoskeletal blueprint in vitro
12:30 - 01:00	Invited Lecture 08 Xin Nie, Thermo Fisher Scientific Theme: Pushing the boundaries in volume EM & Cryo-Tomography
01:00 - 01:15	Closing Session
01:15 - 02:30	Lunch

The details of the cryo-EM symposium are available at <https://cryoem.iitm.ac.in/conference/>

Centre of Excellence (CoE) on Molecular Materials and Functions

We have built a sustainable centre with global visibility on molecular matter, focusing on atomically precise clusters and gas hydrates, to seed, nurture, and expand cutting-edge science and technology in respective areas, collectively with the best people across the world, with the involvement of the next generation.

As a part of this centre, we organized international winter schools, international conferences, lecture series, technical talks and lab visits. Some of these activities of 2024 are shown in the following pages. For more details, please visit coe-on-molecular-materials-and-functions

Activities of Centre of Excellence (CoE) on molecular materials and functions

1. Technical Talks

Talk-1: "MDa mass spectrometry for materials science" by Ms. Anagha Jose, IIT Madras, January 18, 2024.

2. Lab Visits

- I. Visit to the lab of Prof. T. Pradeep, DST Unit of Nanoscience and Technology, Thematic Unit of Excellence, and SERB National Facility of Cryo-Electron Microscopy, Department of Chemistry, IIT Madras, January 25, 2024.

- II. Visit to the lab of Prof. Pijush Ghosh, Department of Mechanical Engineering, IIT Madras, on March 14, 2024.

III. Visit to the lab of Prof. Rajnish Kumar, Department of Chemical Engineering, IIT Madras, April 18, 2024.

IV. Visit to the lab of Prof. Thangavelu Palaniselvam, Department of Chemistry, IIT Madras, June 6, 2024.

3. CoE Winter School on Molecular Materials and Functions 2024

The details of winter school are available at <https://molmatter.org/coe-winter-school-2024/>

 Center of Excellence in Molecular Materials and Functions Second Edition of CoE Winter School on Molecular Materials and Functions - 2024 THEMATIC UNIT OF EXCELLENCE IIT MADRAS Chennai Tamil Nadu - 600036 December 4 th - 8 th Convenors Prof. Thangavelu Palaniselvam Institute Professor Deepak Koren Institute Chair Professor Department of Chemistry IIT Madras Prof. Rajnish Kumar Professor Department of Chemical Engineering IIT Madras		Day - 1 4 December 2024, Wednesday	Day - 2 5 December 2024, Thursday	Day - 3 6 December 2024, Friday
	8:30 - 8:50 am Registration 8:50 - 9:30 am Inauguration by Prof. Rajnish Kumar (Department of Chemical Engineering)	Session 06 09:00 - 10:30 am Prof. Rajnish Kumar (IIT Madras) 10:30 - 10:30 am Teabreak Session 07 10:30 - 12:45 pm Prof. Naoyuki Hoshino (Tokyo University of Science, Japan) 12:45 - 1:30 pm Lunch Break Session 08 1:30 - 1:50 am Prof. Thangavelu Palaniselvam (IIT Madras) 1:50 - 1:55 am Teabreak Session 09 1:55 - 12:45 pm Prof. Thangavelu Palaniselvam (IIT Madras) 12:45 - 1:30 pm Lunch Break Session 10 1:30 - 1:45 pm Prof. Thangavelu Palaniselvam (IIT Madras) 1:45 - 1:50 pm Teabreak Session 11 1:50 - 1:55 pm Prof. Thangavelu Palaniselvam (IIT Madras)	Session 11 09:00 - 10:30 am Prof. Agnieszka Wlochowicz (Wrocław University, USA) 10:30 - 10:30 am Teabreak Session 12 10:30 - 11:45 am Dr. Anshu Kulkarni (IIT Madras) 11:45 - 12:30 pm Lunch Break Session 13 12:30 - 12:45 pm Prof. Thangavelu Palaniselvam (IIT Madras) 12:45 - 1:30 pm Teabreak Session 14 1:30 - 1:45 pm Prof. Thangavelu Palaniselvam (IIT Madras) 1:45 - 1:50 pm Teabreak Session 15 1:50 - 1:55 pm Prof. Thangavelu Palaniselvam (IIT Madras)

IIT-M unveils hybrid course to increase water literacy

Padmaja.J@timesgroup.com

Chennai: In order to create water-literate citizens, IIT Madras has unveiled a hybrid four-month certificate course — Water Quality — An Approach to People's Water Data.

Apart from teaching students, this course will help create a database of ground, surface and piped water quality said T Pradeep, chemistry professor with IIT-M and one of the five instructors of the course. The institute has partnered with Tel Aviv University in Israel for the course.

As a pilot project, IIT Madras trained students of Stella Maris College, Madras Christian College and some students from Erode. It tested the water quality in 300 houses in Chennai and Erode and uploaded the data online. "Major findings from the previous exercise were that people were unaware about water quality and they believed that water from reverse osmosis is pure," said Prof Pradeep.

Now, IIT-M has launched

WATER QUALITY TESTED IN 300 HOUSEHOLDS

this course to expand the initiative. Theory classes will be conducted online and offline about water quality and its impact on human health. The offline practicals involve each student picking 10 houses and testing water quality, including measuring the pH, hardness, coliform, nitrate, chloride etc.

"This course is a deep-dive on water quality. Also, the course will generate water data. If we have 150 students, we will get 1,500 water sample data," said Pradeep.

T Swaminathan, former professor of chemical engineering professor at IIT-M, suggested that the course could involve how different organisms, apart from humans, are affected by water quality.

Students can have a certificate from IIT-M on water quality, which will add to their resumes, and they can apply to water or food testing centres, shared Pradeep.

The course will entail a fee of ₹1,500, which will be refunded after course completion. The fee will also include field test kits. For practicals, the students will be assigned the closest colleges or labs, said Prof Pradeep.

The course will start in January 18. Classes will begin from January 22, on Mondays, Tuesdays and Wednesdays, between 5pm and 5.50pm.

IIT Chennai launches groundbreaking wastewater-based epidemiology project

Led by a team of distinguished researchers at IIT Chennai, this pioneering initiative seeks to revolutionize community health through a data-driven preventive healthcare approach using wastewater surveillance.

Written by EF Science

Updated: January 17, 2024 02:49 IST

'Outstanding work': IIT-M team makes mineral nanoparticles with water

In an important finding independent scientists called a 'striking and non-intuitive result', researchers used really small water droplets to blow up minerals suspended in them into nanoparticles. The underlying science has implications for many things from the origins of life to replenishing soils for farming.

Karthik Vind

Water droplets are ubiquitous around us and come in different sizes. They can be as large as a raindrop or as small as a aerosol particle released from a spray can. They can be even smaller — invisible to the naked eye — when they come as microdroplets. The latter are just a thousandth the size of a typical raindrop, and they are not uncommon in nature. They are, in fact, everywhere. They are, for example, in the atmosphere as aerosols, in the form of clouds, and in the form of rain.

But they can pack a punch. The Pradeep group's study recently published in the journal Science first showed that microdroplets of water can break minerals down into nanoparticles. The team involved researchers from IIT Madras and the Jawahar Institute for Advanced Studies, Bangalore.

The researchers were able to significantly up the pressure of evidence that water droplets enable chemical transformations that both water does not make possible. The lead author, a chemist at Stanford University who wasn't involved in the study, noted the study.

Essentially a proton. This process happens in bulk water as well. But because each microdroplet is surrounded by other water molecules, the proton can't move around much. The surface energy of the microdroplet, the proton ends up on the surface, making the surface more acidic and creating a pH gradient for chemical reactions.

Researchers have shown that similar acids use free protons on their surface as an intermediate to form people biogenes. The new study reported microdroplets have set another ability. An explosive experiment. Dr Pradeep & co. were interested in whether water microdroplets could break down in crystals like silica (SiO₂) and alumina (Al₂O₃) to create nanoscale-sized pieces.

Specifically, they used a PhD student under Dr Pradeep and one of the paper's coauthors, set up an experiment to confirm this hypothesis in crystals of quartz, silica, ruby, and fused alumina. The process involved a heavy metal cation to mineral nanoparticles suspended in water inside the tube. The authors elongated the suspension, separating out or not, and verified if they were still there as a test of their hypothesis. They were still there when, in just 40 milliseconds, the mineral nanoparticles broke up into nanoparticles.

"The researchers had a clear idea about

K. Senthil, who just completed her PhD at IIT Madras, showing an experiment in progress, in a video

Water droplets can be invisible to the naked eye when they come as microdroplets. The latter are just a thousandth the size of a typical raindrop.

what could have caused this break up. The first process could have separated themselves into crystal layers, which they accepted the extent of their water if supplied some energy. The study suggests the electric fields produced by the charged surface could have provided this energy.

Further notes — the flow that keeps droplets together could have been assisted as well. In the experiment, a counter between surface tension, which is attractive, and like charges on the surface repelling each other could have set off the microdroplets.

"This is a striking and non-intuitive result," Shashi Thangappal, a biophysicist at the National Centre for Biological Sciences, Bangalore, who was not involved in the study, said in the think.

"It seems quite possible that the high amount of water in the droplets could cause the particles to break up."

He added that the findings could be useful in the study of proteins, the precursors to cells as we know them today. Scientists are interested in

THE GIST

Water molecules of microdroplets that have been broken into smaller pieces can participate in chemical reactions. The latter are just a thousandth the size of a typical raindrop, and they are not uncommon in nature. They are, in fact, everywhere. They are, for example, in the atmosphere as aerosols, in the form of clouds, and in the form of rain.

But they can pack a punch. The Pradeep group's study recently published in the journal Science first showed that microdroplets of water can break minerals down into nanoparticles. The team involved researchers from IIT Madras and the Jawahar Institute for Advanced Studies, Bangalore.

Stable Dimer Intermediates During Intercluster Reactions of Atomically Precise Nanoclusters

Swetashree Acharya, Jayoti Roy, Diptendu Roy, Biswarup Pathak* and Thalappil Pradeep*

J. Phys. Chem. C, 2024. (Just accepted)

Intercluster reactions involving atomically precise noble metal nanoclusters (NCs) in solution, closely resembling reactions between molecules, are important for exploring chemistry at the nanoscale. In the present study, we conducted reactions between $[Ag_{29}(1,3\text{-BDT})_{12}]^{3-}$ (1,3-BDT = 1,3-benzenedithiol) and center-doped $[M_{Ag_{24}}(2,4\text{-DMBT})_{18}]^{q-}$ ($q = 1$ for $M = Ag, Au$; and $q = 2$ for $M = Pd, Pt$; 2,4-DMBT = 2,4-dimethylbenzenethiol) NCs in solution. For the first time, we report the formation of stable dimers, formed between two NCs with mixed metal-ligand interfaces. The dimeric species formed were $[M_{Ag_{53-x}BDT_{12}DMBT_{18-y}}]^{3-}$ ($x \geq 0$ and $y \geq 0$), with 16 electrons in their valence shells. Here, the dimers were formed irrespective of the nature of the central atom in the NC, although the compositions were different depending on the central atom. These dimers were stable in solution for ~ 2 days.

The dithiol protected $[Ag_{29}BDT_{12}]^{3-}$ part was more stable in the dimers, during fragmentation than the monothiol protected $[MAg_{24}DMBT_{18}]^{q-}$ part. UV/vis spectroscopic and mass spectrometric analyses, along with density functional theory (DFT) calculations were used to understand the dimers. Our work has highlighted the importance of the cluster interface in the stability of the dimer formed. Probing such stable dimers formed during intercluster reactions can help us understand the reaction mechanism in greater detail.

Simulated Interstellar Photolysis of N₂O Ice: Selectivity in Photoproducts

Bijesh K. Malla, Soham Chowdhury, Devansh Paliwal, Hanoona KM, Gaurav Vishwakarma, Rabin Rajan J. Methikkalam, and Thalappil Pradeep*

J. Phys. Chem. C, 2024. (Just accepted) (DOI: [10.1021/acs.jpcc.4c06624](https://doi.org/10.1021/acs.jpcc.4c06624))

Thermal diffusion and recombination control the kinetics of photochemical reactions of reactive radicals formed by ultraviolet photon irradiation in interstellar ices. Here, we show that upon vacuum ultraviolet photolysis, N₂O ice produces

O₃ and several oxides of nitrogen, such as NO, NO₂, N₂O₂, N₂O₃, N₂O₄, and N₂O₅ in interstellar ice mimics. Photoproducts within the bulk and on the surface were analyzed using reflection absorption infrared spectroscopy and Cs⁺ ion-based

secondary ion mass spectrometry, while desorbed species were studied using temperature-programmed desorption mass spectrometry. Notably, thermal annealing of the photo-irradiated ice to 90 K resulted in a significant increase in NO and N_2O_3 . Photoirradiation at 10 K revealed the dominance of three atom photoproducts, such as NO_2 and O_3 . In contrast, irradiation at 50 K significantly enhanced the production of four or higher atom photoproducts (N_2O_2 , N_2O_3 , N_2O_4 , and N_2O_5). This behavior is attributed to the restricted diffusion of reactive radicals and unstable oxygen species (O and O_3) at 10 K, which confines radical-radical reactions to three or fewer atom

photoproducts, whereas higher temperatures facilitate oxygen and other radical diffusion and recombination, yielding heavier photoproducts. These results throw light on the thermal diffusion effects on the kinetics of photoproducts in interstellar ice mimics.

Growth of Clathrate Hydrates in Nanoscale Ice Films Observed Using Electron Diffraction and Infrared Spectroscopy

Bijesh K. Malla, Ding-Shyue Yang*, and Thalappil Pradeep*

J. Phys. Chem. Lett., 2024 (Just accepted) (DOI: [10.1021/acs.jpcclett.4c03106](https://doi.org/10.1021/acs.jpcclett.4c03106))

Clathrate hydrates (CHs) are believed to exist in cold regions of space, such as comets and icy moons. While spectroscopic studies have explored their formation in similar laboratory conditions, direct structural characterization using diffraction techniques has remained elusive. We present the first electron diffraction study of tetrahydrofuran (THF) and 1,3-dioxolane (DIOX) CHs in the form of nanometer-thin ice films under ultrahigh vacuum at cryogenic temperatures. By using reflection high-energy electron diffraction, we show that THF CH grows readily on various substrates during thermal annealing of an amorphous ice mixture of THF and water, and the formation is independent of the nature of the substrate. The growth of DIOX CHs on

an Au (111) substrate is similar. Comparison of electron diffraction patterns with calculated XRD patterns indicates that THF and DIOX form structure II CH ($5^{12}6^4$) with a lattice constant of ~ 17.2 Å (cubic, Fd m). Both CHs were also grown on Ru(0001) and were examined by reflection absorption infrared spectroscopy. A direct comparison of diffraction data with infrared spectra as a function of temperature further demonstrates the

strength of multiple probes in examining complex systems possessing diverse molecular interactions.

Milling-Induced ‘Turn-off’ Luminescence in Copper Nanoclusters

Subrata Duary, Arijit Jana, Amitabha Das, Swetashree Acharya, Amoghavarsha Ramachandra Kini, Jayoti Roy, Ajay Kumar Poonia, Deepak Kumar Patel, Vivek Yadav, P. K. Sudhadevi Antharjanam, Biswarup Pathak*, Adarsh Kumaran Nair Valsala Devi*, and Thalappil Pradeep*

Inorg. Chem., 63, 2024, 18727–18737. (DOI: [10.1021/acs.inorgchem.4c02617](https://doi.org/10.1021/acs.inorgchem.4c02617))

Atomically precise copper nanoclusters (NCs) attract research interest due to their intense photoluminescence, which enables their applications in photonics, optoelectronics, and sensing. Exploring these properties requires carefully designed clusters with atomic precision and a detailed understanding of their atom-specific luminescence properties. Here, we report two copper NCs, $[\text{Cu}_4(\text{MNA})_2(\text{DPPE})_2]$ and $[\text{Cu}_6(\text{MNA-H})_6]$, shortly Cu_4 and Cu_6 , protected by 2-mercaptonicotinic acid (MNA-H_2) and 1,2-bis(diphenylphosphino)ethane (DPPE), showing “turn-off” mechanoresponsive luminescence. Single-crystal X-ray diffraction reveals that in the Cu_4 cluster, two Cu_2 units are appended with two thiols, forming a flattened boat-shaped Cu_4S_2 kernel, while in the Cu_6 cluster, two Cu_3 units form an adamantane-like Cu_6S_6 kernel. High-resolution electrospray ionization mass spectrometry studies

reveal the molecular nature of these clusters. Lifetime decay profiles of the two clusters show the average lifetimes of 0.84 and 1.64 μs , respectively. These thermally stable Cu NCs become nonluminescent upon mechanical milling but regain their emission upon exposure to solvent vapors. Spectroscopic data of the clusters match well with their computed electronic structures. This work expands the collection of thermally stable and mechanoresponsive luminescent coinage metal NCs, enriching the diversity and applications of such materials.

Nanocluster Reaction-Driven in Situ Transformation of Colloidal Nanoparticles to Mesostructures

Paulami Bose, Pillalamarri Srikrishnarka, Matias Paatelainen, Nonappa, Amoghavarsha Ramachandra Kini, Anirban Som, and Thalappil Pradeep*

Nanoscale, 2024. (DOI: [10.1039/d4nr02820a](https://doi.org/10.1039/d4nr02820a))

Atomically precise noble metal nanoclusters (NCs) are molecular materials known for their precise composition, electronic structure, and unique optical properties, exhibiting chemical reactivity. Herein, we demonstrated a simple one-pot method for fabricating self-assembled Ag–Au bimetallic mesostructures using a reaction between 2-phenylethanethiol (PET)-protected atomically precise gold NCs and colloidal silver nanoparticles (Ag NPs) in a tunable reaction microenvironment. The reaction carried out in toluene at 45 °C with constant stirring at 250 revolutions per minute (RPM) yielded a thermally stable, micron-sized cuboidal mesocrystals of self-assembled AgAu@PET nanocrystals. However, the reaction in dichloromethane at room temperature with constant stirring at 250 RPM resulted in a self-assembled

mesostructure of randomly close-packed AgAu@PET NPs. Using a host of experimental techniques, including optical and electron microscopy, optical absorption spectroscopy, and light scattering, we studied the nucleation and growth processes. Our findings highlight a strategy to utilize precision and plasmonic NP chemistry in tailored microenvironments, leading to customizable bimetallic hybrid three dimensional nanomaterials with potential applications.

Enhanced Electrical Output in an Electrostatic Generator Using Charged Water

Vishal Kumar, Pillalamarri Srikrishnarka, Ramamurthy Nagarajan*, and Thalappil Pradeep*

ACS Sustainable Chem. Eng., 12, 2024, 13106–13115(DOI:[10.1021/acssuschemeng.4c01860](https://doi.org/10.1021/acssuschemeng.4c01860))

Electrostatic charging of water, particularly at the water–hydrophobic interface, continues to perplex researchers despite centuries of work. Recent advancements in energy harvesting, materials synthesis, and sensing employing electrohydrodynamic processes have generated renewed interest in the electrostatic charging of water. This work aims to understand the charging of water from an energy-harvesting perspective. We used a single-electrode electrostatic generator initially to demonstrate enhancement of the electric output with the addition of water. Through several control measurements, we established that the enhancement was a result of the electrostatic charging of water.

The role of electrode wettability and pH on the electric output was studied. The effect of pH on the charging of water was correlated with the output voltage. The system was extended to a double-electrode electrostatic generator (DE-EG) to expand the applicability of the technique and increase the output. Using

the DE-EG, we demonstrated the influence of an electric field on the charging of water. The electricity thus produced was used to power multiple light-emitting diodes. Furthermore, the technique was employed to treat wastewater containing a dye using

a 3D-printed linear actuator. The insights presented are useful in enhancing the performance of water-based EGs and could help to better understand various electrohydrodynamic processes.

Multicolor Photoluminescence of Cu₁₄ Clusters Modulated Using Surface ligands

Arijit Jana, Subrata Duary, Amitabha Das, Amoghavarsha Ramachandra Kini, Swetashree Acharya, Jan Machacek, Biswarup Pathak*, Tomas Base* and Thalappil Pradeep*

Chem. Sci., 15, 2024, 13741–13752. (DOI: [10.1039/D4SC01566E](https://doi.org/10.1039/D4SC01566E))

Copper nanoclusters exhibit unique structural features and their molecular assembly results in diverse photoluminescence properties. In this study, we present ligand-dependent multicolor luminescence observed in a Cu₁₄ cluster, primarily protected by *ortho*-carborane-9,12-dithiol (*o*-CBDT), featuring an octahedral Cu₆ inner kernel enveloped by eight isolated copper atoms. The outer layer of the metal kernel consists of six bidentate *o*-CBDT ligands, in which carborane backbones are connected through μ_3 -sulphide linkages. The initially prepared Cu₁₄ cluster, solely protected by six *o*-CBDT ligands, did not crystallize in its native form. However, in the presence of *N,N*-dimethylformamide (DMF), the cluster crystallized along with six DMF molecules. Single-crystal X-ray diffraction (SCXRD) revealed that the DMF molecules were directly coordinated to six of the eight capping Cu atoms, while oxygen atoms were bound to the two remaining Cu apices in antipodal positions. Efficient tailoring of the cluster surface with DMF shifted its luminescence from yellow to bright red.

Luminescence decay profiles showed fluorescence emission for these clusters, originating from the singlet states. Additionally, we synthesized microcrystalline fibers with a one-dimensional assembly of DMF-appended Cu₁₄ clusters and bidentate DPPE linkers. These fibers exhibited bright greenish-yellow phosphorescence emission, originating from the triplet state, indicating the drastic surface tailoring effect of secondary ligands. Theoretical calculations provided insights into the electronic energy levels and associated electronic transitions for these clusters. This work demonstrated dynamic tuning of the emissive excited states of copper nanoclusters through the efficient engineering of ligands

From Solution to Microstructures in Minutes: Microdroplet-Derived Stand-Alone TiO₂ Surfaces for Simultaneous Water Harvesting and Treatment

Keerthana Unni, Jenifer Shantha Kumar, Anirban Som, Depanjan Sarkar* and Thalappil Pradeep*

ACS Sustainable Chem. Eng., 12, 2024, 11957–11967.

(DOI:[10.1021/acssuschemeng.4c02806](https://doi.org/10.1021/acssuschemeng.4c02806))

We present a straightforward and eco-friendly method to transform a titanium tetraisopropoxide (TTIP) solution into superhydrophobic TiO₂ microstructures by ambient microdroplet deposition. At lower temperatures the micropillars of amorphous TiO₂ act as nucleation sites for condensing humidity to form droplets. However, the microstructures facilitate efficient water runoff despite TiO₂'s hydrophilic character by a combination of surface hydrophobicity and gravity. Additionally, the photocatalytic TiO₂ surface resists biofilm formation and degrades the contaminants, offering long-term collection of safe water and its purification, which has been demonstrated

with examples. We demonstrate that the microdroplet-based methodology developed for the conversion of solution into microdroplets can also be applied to other metal oxides, including CuO and ZnO, highlighting the universality of the process.

Cysteine-Protected Antibacterial Spheroids of Atomically Precise Copper Clusters for Direct and Affordable Arsenic Detection from Drinking Water

Jenifer Shantha Kumar, Arijit Jana, Jayathraa Raman, Hema Madhuri Veera, Amoghavarsha Ramachandra Kini, Jayoti Roy, Saurav Kanti Jana, Tiju Thomas and Thalappil Pradeep*

Environ. Sci. Technol. Lett., 11, 2024, 831–837. (DOI: [10.1021/acs.estlett.4c00264](https://doi.org/10.1021/acs.estlett.4c00264))

Rapid and naked-eye detection of water-borne contaminants using molecularly precise nanomaterials has emerged as a promising strategy to reduce the impact of chemical pollution. This study presents a luminescence-based arsenic (As) sensor, eliminating the need for sample preparation. Incorporating red-emitting spheroidal cluster-assembled superstructures (CASs), comprised of

Cu₁₇ nanoclusters (Cu₁₇NCs), coprotected by l-cysteine (l-Cys) and 1,2-

bis(diphenylphosphino) ethane (DPPE) ligands, the sensor exhibits notable sensitivity toward arsenite (As^{3+}) and (As^{5+}) ions. A detection limit of 1 ppb in tap water was achieved through luminescence-based quenching. Remarkably, it demonstrates selective detection of As amidst common interfering metal ions such as Cd^{2+} , Hg^{2+} , Fe^{3+} , Pb^{2+} , Cu^{2+} , and Cr^{3+} . A sensor disc made of CASs coated on nonwoven polypropylene (PP) mats has been devised for practical field applications. Electron

microscopy reveals disrupted morphology of the spheroids due to As interaction. Moreover, the CASs exhibit significant antibacterial efficacy against Gram-negative *Escherichia coli* and Gram-positive *Staphylococcus aureus* and antibiofilm properties against *Bacillus subtilis*. This research highlights the effectiveness of atomically precise clusters for a practical application with direct societal relevance.

Extensive Polymerization of Atomically Precise Alloy Metal Clusters During Solid State Reactions

B. S. Sooraj, Jayoti Roy, Manish Mukherjee, Anagha Jose and Thalappil Pradeep*

Langmuir, 40, 2024, 15244–15251. (DOI: [10.1021/acs.langmuir.4c01737](https://doi.org/10.1021/acs.langmuir.4c01737))

Exploring the reactions between atomically precise metal clusters and the consequences of such reactions has been an exciting field of research during the past decade. Initial studies in the area were on reactions between clusters in the solution phase, which proceed through the formation of dimers of reacting clusters. In the present work, we examine the interaction between two atomically precise clusters, $[Au_{25}(PET)_{18}]^-$ and $[Ag_{25}(DMBT)_{18}]^-$, in the solid state, where PET and DMBT are 2-phenylethanethiol and 2,4-dimethylbenzenethiol, respectively. The experiments were performed using different ratios of these two clusters, and it was inferred that the kinetics of the reactions were faster compared with reactions in the solution. The metal exchange between these two clusters, due to their interactions in the solid state, leads to the formation of dimers, trimers,

tetramers, and polymers of atomically precise alloy metal clusters. We observed polymer entities up to hexamers, which were observed for the first time. Control experiments revealed that metal exchange is a key factor leading to polymerization. Our work points to a new approach for synthesizing polymers of atomically precise alloy metal clusters.

Partitioning Photochemically Formed CO₂ into Clathrate Hydrate under Interstellar Conditions

Gaurav Vishwakarma, Bijesh K. Malla, Rajnish Kumar* and Thalappil Pradeep*

Phys. Chem. Chem. Phys., 26, 2024, 16008–16016. (DOI: [10.1039/D4CP01414F](https://doi.org/10.1039/D4CP01414F))

Clathrate hydrates (CHs), host–guest compounds of water forming hydrogen-bonded cages around guest molecules, are now known to exist under interstellar conditions. Experimental evidence demonstrated that prolonged thermal treatment of a solid mixture of water and CO₂/CH₄ produces CHs at 10–30 K under simulated interstellar conditions. However, in the current study, we show that CO₂ produced photochemically by vacuum ultraviolet irradiation of H₂O–CO mixtures at 10 K and $\sim 10^{-10}$ mbar, gets partitioned into its CH phase and a matrix phase embedded in amorphous ice. The process occurring under simulated interstellar conditions was studied at different temperatures and H₂O–CO compositions. The formation of CO₂ CH and other photoproducts was confirmed using reflection absorption infrared spectroscopy. The UV-induced photodesorption event of CO₂ may provide

the mobility required for the formation of CHs, while photoproducts like methanol can stabilize such CH structures. Our study suggests that new species originating during such energetic processing in ice matrices may form CH, potentially altering the chemical composition of astrophysical environments.

Interparticle Antigalvanic Reactions of Atomically Precise Silver Nanoclusters with Plasmonic Gold Nanoparticles: Interfacial Control of Atomic Exchange

Paulami Bose, Jayoti Roy, Vikash Khokhar, Biswajit Mondal, Ganapati Natarajan, Sujan Manna, Vivek Yadav, Anupriya Nyayban, Sharma S. R. K. C. Yamijala*, Nonappa*, and Thalappil Pradeep*

Chem. Mater., 36, 2024, 7581–7594. (DOI: [10.1021/acs.chemmater.4c00620](https://doi.org/10.1021/acs.chemmater.4c00620))

This work demonstrates that antigalvanic reactions (AGRs) between thiol-protected plasmonic gold nanoparticles (NPs) and atomically precise silver nanoclusters (NCs) are an interfacial chemistry-driven

phenomenon. We reacted 2,4-dimethylbenzenethiol (DMBT)-protected Au NPs (average diameter of 4.46 ± 0.64 nm) with atomically precise [Ag₂₅(DMBT)₁₈][−] NC and obtained

bimetallic AgAu@DMBT alloy NPs. Systematic investigations with optical absorption spectroscopy, high-resolution transmission/scanning transmission electron microscopy, and elemental mapping revealed the reaction-induced morphological and compositional transformation in NPs. Furthermore, we show that such AGRs get restricted when geometrically rigid interfaces are used. For this, we used 1,3-benzenedithiol (BDT)-protected Au@BDT NPs and $[\text{Ag}_{29}(\text{BDT})_{12}(\text{TPP})_4]^{3-}$ NCs (TPP = triphenylphosphine). Electro spray ionization mass spectrometric (ESI MS) studies revealed that the interparticle reaction proceeds via metal–ligand and/or metal exchange, depending on the

interface. Density functional theory (DFT) calculations and molecular docking simulations were used to understand the interactions and reaction energetics leading to favorable events. Interfacial chemistry of this kind might offer a one-pot synthetic strategy to create ultrafine bimetallic NP-based hybrid materials with potential optoelectronic and catalytic applications.

Observing Atomically Precise Nanocluster Aggregates in Solution by Mass Photometry

Jayoti Roy, Ila Marathe, Vicki Wysocki and Thalappil Pradeep*

Chem. Commun., 60, 2024, 6655–6658. (DOI: [10.1039/D4CC00363B](https://doi.org/10.1039/D4CC00363B))

We report the first mass photometric characterization of nanoaggregates of atomically precise nanoclusters (NCs) in solution. The differently-sized nanoaggregates of silver–gold alloy NCs, $[\text{Ag}_{11-x}\text{Au}_x(\text{DPPB})_5\text{Cl}_5\text{O}_2]^{2+}$ [$x = 1-5$ and DPPB = 1,4-bis(diphenylphosphino)butane], formed in solution, were examined by mass photometry (MP) with a protein calibration. In addition, we conducted MP studies of varying solvent composition to

understand the structural evolution of nanoaggregates. The masses of nanoaggregates were correlated to structures of 15 to 50 nm diameter observed in cryo-electron microscopy.

Interfacial Growth of Large Area Single-Crystalline Silver Sheets Through Ambient Microdroplets

Debanjan Sarkar*, Anirban Som, Keerthana Unni, Sujan Manna, and Thalappil Pradeep*

Small, 2024, 2400159. (DOI: [10.1002/smll.202400159](https://doi.org/10.1002/smll.202400159))

We report the creation of micrometer-sized sheets of silver at the air-water interface by direct deposition of electro spray-generated silver ions (Ag^+) on an aqueous dispersion of reduced graphene oxide (RGO), in ambient conditions. In the process of electro spray deposition (ESD), an electrohydrodynamic flow is created in the aqueous dispersion, and the graphene sheets assemble, forming a thin film at the air-water interface. The deposited Ag^+ coalesce to make single-crystalline Ag sheets on top of this assembled graphene layer. Fast neutralization of Ag^+ forming atomic Ag, combined with their enhanced mobility on graphene surfaces, presumably facilitates the growth of larger Ag clusters. Moreover, restrictions imposed by the interface drive the crystal growth in two dimensions. By controlling the precursor salt

concentration, RGO concentration, deposition time, and ion current, the dimensionality of the Ag sheets could be tuned. These Ag sheets are effective substrates for surface-enhanced Raman spectroscopy (SERS), as demonstrated by the successful detection of methylene blue at nanomolar concentrations.

Spontaneous Weathering of Natural Minerals in Charged Water Microdroplets forms Nanomaterials

B. K. Spoorthi, Koyendril Debnath, Pallab Basuri, Ankit Nagar, Umesh V. Waghmare, and Thalappil Pradeep*

Science, 384, 2024, 1012–1017. (DOI: [10.1126/science.adl3364](https://doi.org/10.1126/science.adl3364))

In this work, we show that particles of common minerals break down spontaneously to form nanoparticles in charged water microdroplets within milliseconds. We transformed micron-sized natural minerals like quartz and ruby into 5- to 10-nanometer particles when integrated into aqueous microdroplets generated via electro spray. We deposited the droplets on a substrate, which allowed nanoparticle characterization. We determined through simulations that quartz undergoes proton-induced slip,

especially when reduced in size and exposed to an electric field. This leads to particle scission and the formation of

silicate fragments, which we confirmed with mass spectrometry. This rapid weathering process may be important for

soil formation, given the prevalence of charged aerosols in the atmosphere.

Spontaneous α -C–H Carboxylation of Ketones by Gaseous CO_2 at the Air–Water Interface of Aqueous Microdroplets

Pallab Basuri[#], Sinchan Mukhopadhyay[#], K.S.S.V. Prasad Reddy, Keerthana Unni, B. K. Spoorthi, Jenifer Shantha Kumar, Sharma S.R.K.C. Yamijala, and Thalappil Pradeep*

Angew. Chem. Int. Ed., 63, 2024, e202403229. (DOI: [10.1002/anie.202403229](https://doi.org/10.1002/anie.202403229))

We present a catalyst-free route for the reduction of carbon dioxide integrated with the formation of a carbon-carbon bond at the air/water interface of negatively charged aqueous microdroplets, at ambient temperature. The reactions proceed through carbanion generation at the α -carbon of a ketone followed by nucleophilic addition to CO_2 . Online mass spectrometry reveals that the product is an β -ketoacid. Several factors, such as the concentration of the reagents, pressure of CO_2 gas, and distance traveled by the droplets, control the kinetics of the reaction. Theoretical calculations suggest that water in the microdroplets facilitates

this unusual chemistry. Furthermore, such a microdroplet strategy has been extended to seven different ketones. This work demonstrates a green pathway for the reduction of CO_2 to useful carboxylated organic products.

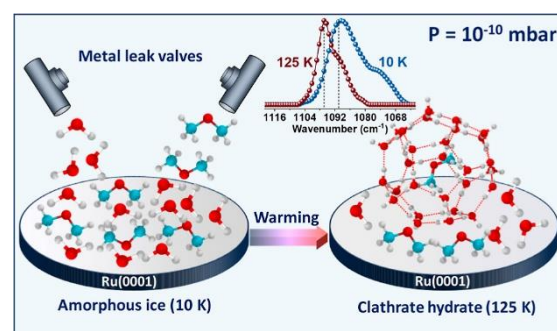

Formation and Dissociation of Dimethyl Ether Clathrate Hydrate in Interstellar Ice Mimics

J. Phys. Chem. C, 128, 2024, 2463–2470. (DOI: [10.1021/acs.jpcc.3c07792](https://doi.org/10.1021/acs.jpcc.3c07792))

Clathrate hydrates (CHs) are believed to exist within interstellar environments, potentially contributing to the preservation of diverse volatile compounds within icy bodies across the cosmos. In this study, using reflection absorption infrared spectroscopy, we show the formation of dimethyl ether (DME) CH from a vapor-deposited DME–water amorphous ice mixture. Experiments were conducted in

an environment mimicking interstellar conditions: ultrahigh vacuum ($P \sim 5 \times 10^{-}$

¹⁰ mbar) and cryogenic conditions ($T \sim 10$ – 150 K). Thermal annealing of the amorphous ice mixture to a higher temperature ($T \sim 125$ K) resulted in the formation of CH. Quantum chemical calculations suggested the formation of $5^{12}6^4$ cages of structure II CH. Subsequent investigations into the dissociation of DME CH unveiled its transformation into hexagonal ice, requiring a substantial

activation energy of $68.04 \text{ kJ mol}^{-1}$. Additionally, confirmation of the formation and dissociation of CH was supported by temperature-programmed desorption mass spectrometry. These results significantly advance our understanding of the existence of CHs under extreme conditions relevant to an interstellar medium.

Acknowledgements

We thank our collaborators and students for their hard work.

We are grateful to IIT Madras for its continued support.

Department of Science and Technology (DST), Government of India, Anusandhan National Research Foundation (ANRF), Science and Engineering Research Board (SERB), Ministry of Mines, MRF Ltd., Venus Safety and Health Private Ltd., Ambernath Organics Private Ltd., Crypto Relief and Government of Punjab are thanked for their generous funding.
