available; and (c) continued retention matrix is difficult. ate a unique family of nanocrystalline n granular composite materials pre- ature through an aqueous route. The mposition is attributed to abundant -O: on chitosan, which help in the crys- oxide and also ensure strong covalent: surface to the matrix. X-ray photo- ) confirms that the composition is rich ps. Using hyperspectral imaging, the: aching in the water was confirmed. to reactivate the silver nanoparticle: ial antimicrobial activity in drinking: osites have been developed that can: its in water. We demonstrate an af-: device based on such composites dem-: undergoing field trials in India, as: spread eradication of the waterborne

RESULTS AND DISCUSSION

# Range of materials, their affordability and safety

## Safety of spent media, TCLP

A. Anil Kumar, et. al. *Adv. Mater.*, 29 (2016) 1604260.

# Clean water for everyone

---

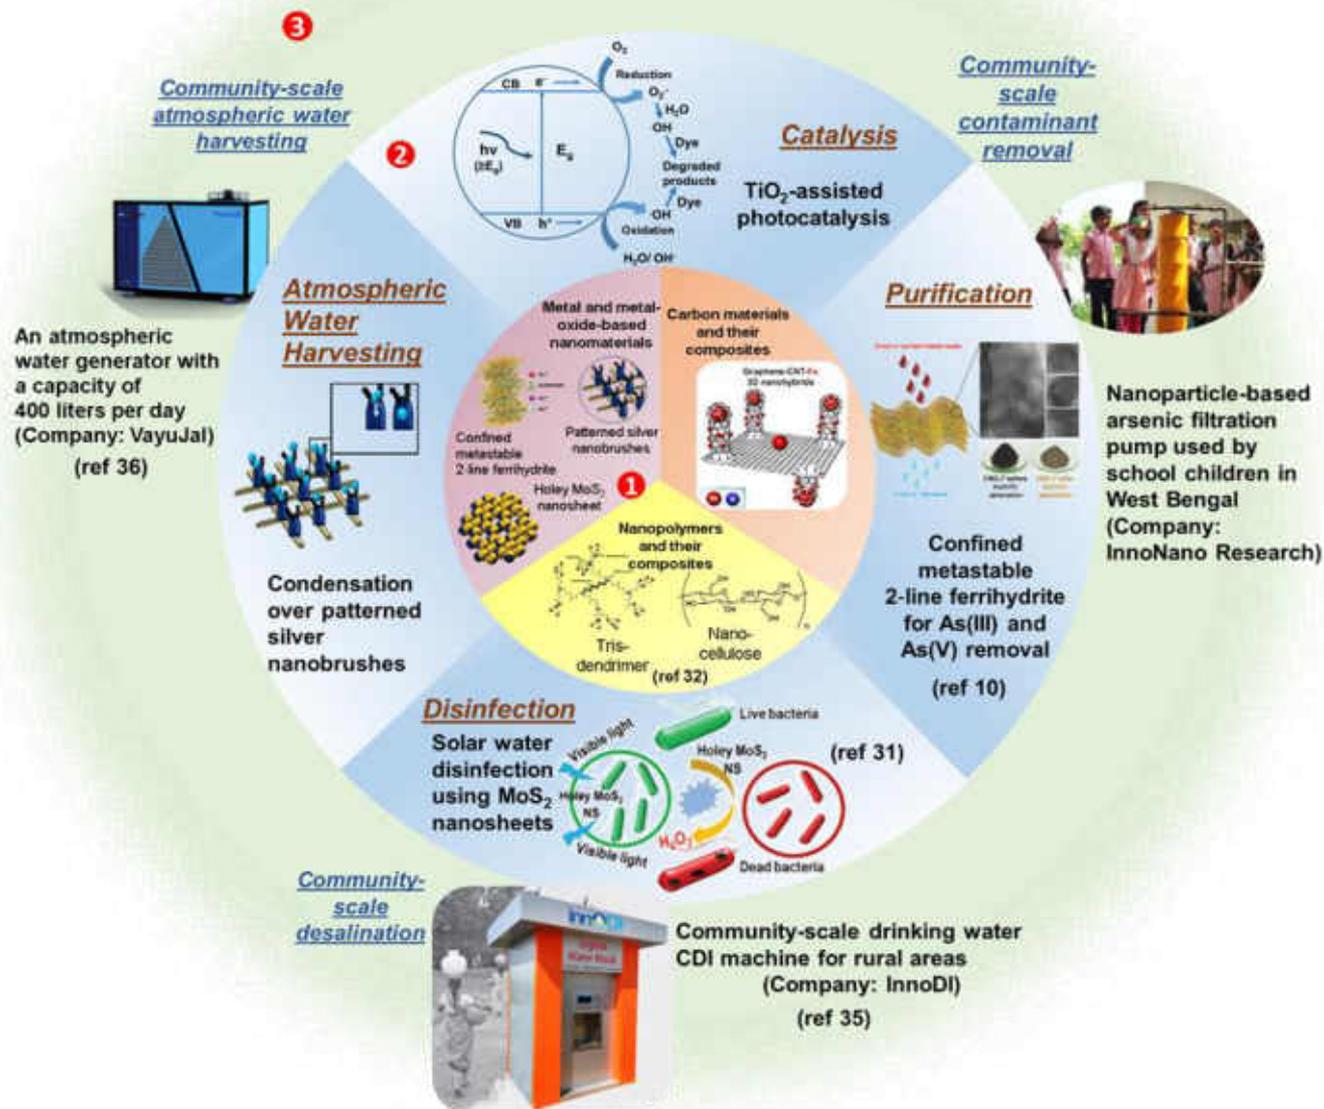

ACS Sustainable Chemistry & Engineering Editorial,  
December 2016

We developed environmentally friendly water positive nanoscale materials for affordable, sustainable and rapid removal of arsenic from drinking water.

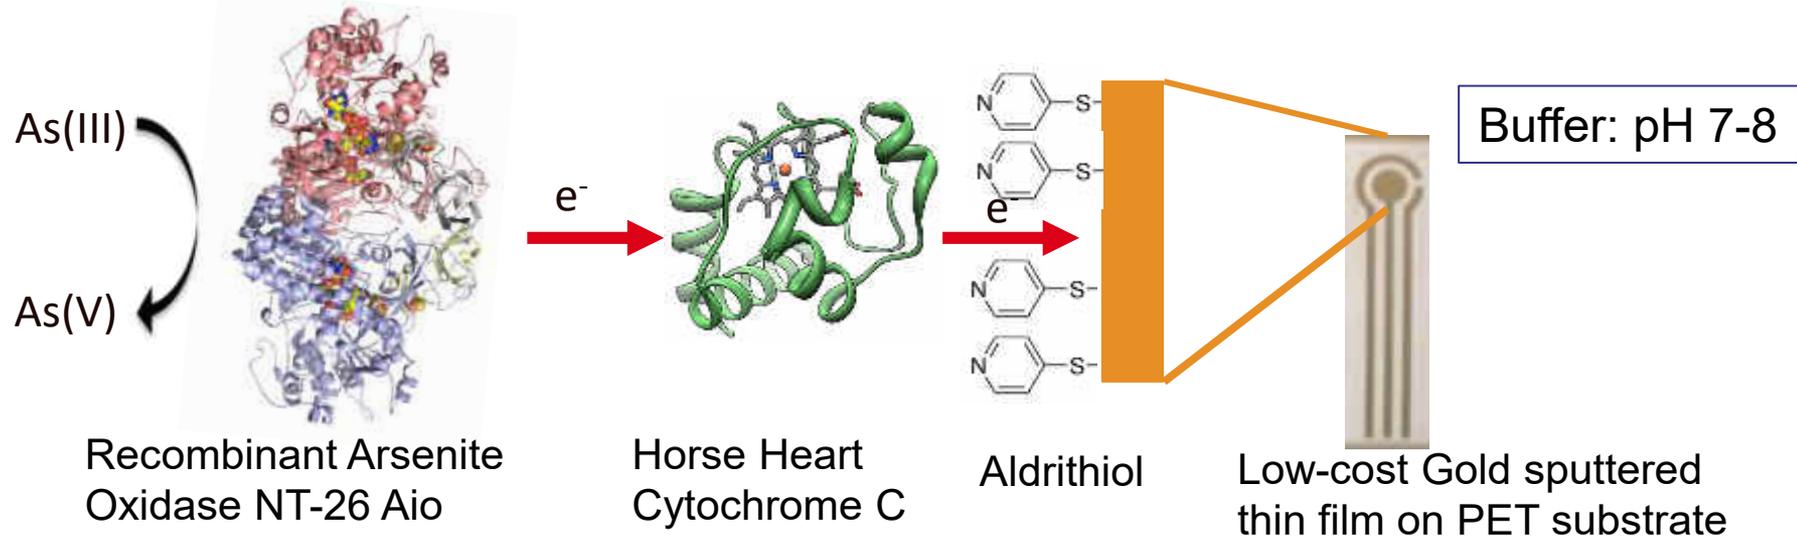

There are over 1700 community installations across the country, serving 1.3 million people with arsenic and iron-free water every day.
